The *Preschool Evaluation Scale-Second Edition (PES-2)* was developed to provide educators, diagnosticians, pediatricians, and psychologists with a measure of child development from 0 through 72 months of age. The PES-2 may be used to contribute to the early identification of students with developmental delays for the purpose of implementing an intervention plan for remediation. The PES-2 is based on the most commonly recognized domains of child development identified in the federal definition of developmental delays (PL 99-457). Each subscale is associated with one of the developmental domains.

The PES-2 subscales are:

- *Large Muscle Skills,*
- *Small Muscle Skills,*
- *Cognitive Thinking,*
- *Expressive Language Skills,*
- *Social/Emotional, and*
- *Self-Help Skills.*

During development, the PES-2 *School and Home Versions* were subjected to field testing on children from 0 through 72 months of age resulting in the norms included in the final version of each scale. The PES-2 *School Version* was standardized on a total of 1,608 children in 22 states. The PES-2 *Home Version* was standardized on a total of 979 children in 18 states. Gender and age specific norms are provided. Demographic characteristics of the standardization population approximated the demographic characteristics of the nation. Age equivalents for both home and school can be determined.

Internal consistency of the PES-2 *School Version: 0-35 and 36-72* exceeded .97 for the total score. Test-retest reliability correlation coefficient was .94 for the total score. Inter-rater reliability coefficients for the PES-2 *SV: 36-72 Months* subscales ranged from .64 to .83. Content validity was established by the initial development process. All six subscales of the PES-2 *School Version* were compared to the *Developmental Profile 3 (DP-3)* as a measure of concurrent validity.

The internal consistency reliability coefficients for the PES-2 *Home Version: 0-35 and 36-72* exceeded .96 for the total score. Test-retest reliability correlation coefficients ranged from .84 to .94 for the PES-2 *HV: 36-72* subscales. Coefficients for inter-rater reliability of the PES-2 *HV: 0-35 and 36-72* ranged from .68 to .96. Content validity was established by the initial development process. All six subscales of the PES-2 *HV: 0-35 and 36-72* were compared to the *Developmental Profile 3 (DP-3)* as a measure of concurrent validity.

The PES-2 uses frequency-referenced quantifiers. Each item on the PES-2 is rated on a three-point scale from (0) **CAN NOT PERFORM THE BEHAVIOR** to (2) **PERFORMS THE BEHAVIOR SUCCESSFULLY AND INDEPENDENTLY**. Following administration, five types of scores may be obtained: frequency rating for each item (reflecting the degree of success in performing a behavior), subscale raw score (the sum of the frequency ratings for each subscale), subscale standard score (a consistent basis for comparing students), and total score quotient and percentile. The subscale standard scores may be plotted on the Profile Sheet graph for a visual representation of the student's level of functioning across the 6 subscales.

The PES-2 takes approximately 20 minutes for anyone familiar with the child to complete. The PES-2 complete kit consists of 0-35 Months and 36-72 Months school and home version rating forms and technical manuals. The PES-2 *Quick Score Windows®*-compatible program converts ratings to standardized scores. The *Preschool Development Guide* which will include goals, objectives, and intervention strategies for the behaviors on the scales is currently being developed.
