The Extended Self Architecture Memes And Minds:

The extended self Chris Abel, 2016-10-28 In this wide ranging study of architecture and cultural evolution the author argues that underlying the global environmental crisis is a general resistance to changing personal and social identities shaped by a technology based culture and its energy hungry products The book traces the roots of that culture to the coevolution of Homo sapiens and technology from the first use of tools as artificial extensions of the human body to the motorised cities spreading around the world whose uncontrolled effects are changing the planet itself Advancing a new concept of the meme called the technical meme as the primary agent of cognitive extension and technical embodiment the author proposes a theory of the extended self encompassing material and spatial as well as psychological and social elements Drawing upon research from philosophy psychology and the neurosciences the book presents a new approach to environmental and cultural studies that will appeal to a broad readership searching for insights into the crisis **Network**

Nature Richard Coyne, 2018-04-05 How do people avoid the stresses of the digital age Urban dwellers must now turn to nature to recover restore and rebalance after the stresses brought on by relentless digital connectivity It is easy to task nature as the cure with technology as the ailment In *Network Nature* Richard Coyne challenges the definitions of both the natural and the artificial that support this time worn narrative of nature s benefits In the process he attacks the counter claim that nature must succumb to the sovereignty of digital data Covering a spectrum of issues and concepts from big data and biohacking to animality numinous spaces and the post digital he draws on the rich field of semiotics as applied to natural systems and human communication to enhance our understanding of place landscape and architecture in a digital world

The Self-Field Chris Abel, 2021-03-15 In this incisive study of the biological and cultural origins of the human self the author challenges readers to re think ideas about the self and consciousness as being exclusive to humans In their place he expounds a metatheoretical approach to the self as a purposeful system of extended cognition common to animal life the invisible medium maintaining mind body and environment as an integrated field of being Supported by recent research in evolutionary and developmental studies together with related discoveries in animal behaviour and the neurosciences the author examines the factors that have shaped the evolution of the animal self across widely different species and times through to the modern technologically enmeshed human self the differences between which he contends are relations of degree rather than absolute differences We are he concludes instinctive and fuzzy individuals clinging to fragile identities in an artificial and volatile world of humanity s own making but which we now struggle to control This book which restores the self to its fundamental place in identity formation will be of great interest for students and academics in the fields of social developmental and environmental psychology together with readers from other disciplines in the humanities especially philosophy cultural theory and architecture *Cognitive Architectures* Maria Isabel Aldinhas Ferreira, João Silva Sequeira, Rodrigo Ventura, 2018-09-03 This book provides an integrated framework for natural and artificial cognition by

highlighting the fundamental role played by the cognitive architecture in the dialectics with the surrounding environment and consequently in the definition of a particular meaningful world This book is also about embodied and non embodied artificial systems cognitive architectures that are human constructs meant to be able to populate the human world capable of identifying different life contexts and replicating human patterns of behavior capable of acting according to human values and conventions systems that perform tasks in a human like way By identifying the essential phenomena at the core of all forms of cognition the book addresses the topic of design of artificial cognitive architectures in the domains of robotics and artificial life Moving from mere bio inspired design methodology it aims to open a pathway to semiotically determined design

Merleau-Ponty for Architects Jonathan Hale, 2016-07-01 The philosophy of Maurice Merleau Ponty 1908 1961 has influenced the design work of architects as diverse as Steven Holl and Peter Zumthor as well as informing renowned schools of architectural theory notably those around Dalibor Vesely at Cambridge Kenneth Frampton David Leatherbarrow and Alberto Perez Gomez in North America and Juhani Pallasmaa in Finland Merleau Ponty suggested that the value of people's experience of the world gained through their immediate bodily engagement with it remains greater than the value of understanding gleaned through abstract mathematical scientific or technological systems This book summarizes what Merleau Ponty's philosophy has to offer specifically for architects It locates architectural thinking in the context of his work placing it in relation to themes such as space movement materiality and creativity introduces key texts helps decode difficult terms and provides quick reference for further reading

Science and Modernity S. Lelas, 2001-11-30 Science is a multifaceted natural and historical phenomenon It consists of five elements that is it happens in five distinct media biological linguistic technological social and historical None of these alone provides an indubitable basis for the truth of scientific knowledge but combined together they compose a solid ground for our trust in its reliability The composition however is uniquely related to our modern mode of living Science did not exist before modernity and it will cease to exist in this form if our way of life should change The book presents a thorough analysis of all these dimensions and their relations and thus lays the path for an integral theory of science Because of this it can be used as a textbook for general courses in the theory of science at both the undergraduate and graduate level

The Seductions of Darwin Matthew Rampley, 2017-01-12 The surge of evolutionary and neurological analyses of art and its effects raises questions of how art culture and the biological sciences influence one another and what we gain in applying scientific methods to the interpretation of artwork In this insightful book Matthew Rampley addresses these questions by exploring key areas where Darwinism neuroscience and art history intersect Taking a scientific approach to understanding art has led to novel and provocative ideas about its origins the basis of aesthetic experience and the nature of research into art and the humanities Rampley's inquiry examines models of artistic development the theories and development of aesthetic response and ideas about brain processes underlying creative work He considers the validity of the arguments put forward by advocates of evolutionary and neuroscientific analysis as well

as its value as a way of understanding art and culture With the goal of bridging the divide between science and culture Rampley advocates for wider recognition of the human motivations that drive inquiry of all types and he argues that our engagement with art can never be encapsulated in a single notion of scientific knowledge Engaging and compelling The Seductions of Darwin is a rewarding look at the identity and development of art history and its complicated ties to the world of scientific thought

Bioviolence William Watkin, 2021-07-18 Aylan Isis Begum Grenfell Trump Harambe Guantanamo Syria Brexit Johnson COVID migrants trolling George Floyd Trump Gazing over the fractured contested territories of the current global situation Watkin finds that all these diverse happenings have one element in common They occur when biopolitical states in trying to manage and protect the life rights of their citizens habitually end up committing acts of coercion or disregard against the very people they have promised to protect When states tasked with making us live find themselves letting us die then they are practitioners of a particular kind of force that Watkin calls bioviolence This book explores and exposes the many aspects of contemporary biopower and bioviolence neglect exclusion surveillance regulation encampment trolling fake news terrorism and war As it does so it demonstrates that the very term violence is a discursive construct an effect of language made real by our behaviours embodied by our institutions and disseminated by our technologies In short bioviolence is how the contemporary powers that be make us do what they want Resolutely interdisciplinary this book is suitable for all scholars students and general readers in the fields of IR political theory philosophy the humanities sociology and journalism

The Electric Meme Robert Aunger, 2013-07-30 From biology to culture to the new new economy the buzzword on everyone's lips is meme How do animals learn things How does human culture evolve

How does viral marketing work The answer to these disparate questions and even to what is the nature of thought itself is simply the meme For decades researchers have been convinced that memes were The Next Big Thing for the understanding of society and ourselves But no one has so far been able to define what they are Until now Here for the first time Robert Aunger outlines what a meme physically is how memes originated how they developed and how they have made our brains into their survival systems They are thoughts They are parasites They are in control A meme is a distinct pattern of electrical charges in a node in our brains that reproduces a thousand times faster than a bacterium Memes have found ways to leap from one brain to another A number of them are being replicated in your brain as you read this paragraph In 1976 the biologist Richard Dawkins suggested that all animals including humans are puppets and that genes hold the strings That is we are robots serving as life support for the genes that control us And all they want to do is replicate themselves But then we do lots of things that don't seem to help genes replicate We decide not to have children we waste our time doing dangerous things like mountain climbing or boring things like reading or stupid things like smoking that don't seem to help genes get copied into the next generation We do all sorts of cultural things for reasons that don't seem to have anything to do with genes Fashions in sports books clothes ideas politics lifestyles come and go and give our lives meaning so how can we be gene robots Dawkins recognized that something else was going on We communicate with one another and we get ideas and these ideas seem to have a life of their own Maybe there was something called memes that were like thought genes Maybe our bodies were gene robots and our minds were meme robots That would mean that what we think is not the result of our own creativity but rather the result of the evolutionary flow of memes as they wash through us What is the biological reality of an idea with a life of its own What is a thought gene It's a meme And no one before Robert Aunger has established what it physically must be This elegant paradigm shifting analysis identifies how memes replicate in our brains how they evolved and how they use artifacts like books and photographs and advertisements to get from one brain to another Destined to inflame arguments about free will open doors to new ways of sharing our thoughts and provide a revolutionary explanation of consciousness The Electric Meme will change the way each of us thinks about our minds our cultures and our daily choices

The Meme Machine Susan Blackmore, 2000-03-16 Humans are extraordinary creatures with the unique ability among animals to imitate and so copy from one another ideas habits skills behaviours inventions songs and stories These are all memes a term first coined by Richard Dawkins in 1976 in his book *The Selfish Gene* Memes like genes are replicators and this enthralling book is an investigation of whether this link between genes and memes can lead to important discoveries about the nature of the inner self Confronting the deepest questions about our inner selves with all our emotions memories beliefs and decisions Susan Blackmore makes a compelling case for the theory that the inner self is merely an illusion created by the memes for the sake of replication

The Selfish Meme Kate Distin, 2005 This book presents for the first time a fully developed and workable concept of cultural DNA

Excursions to the Far Side of the Mind Howard Rheingold, 2012-04-21

Renowned for exploring the social implications of modern technology Howard Rheingold has been dubbed by MIT the first citizen of the Internet In this collection of funny prescient thought provoking essays originally published during the 1970s and 1980s he offers a glimpse into the changes wrought during that explosive period From the effects of the graphic user interface GUI not only on how we work but how we think to technarchist movements that presaged both the hacker mentality and the anarchist idealism of Burning Man today to a ground floor view of the very earliest of what Rheingold was the first to dub virtual communities his Excursions run the gamut from the silly to the profound These essays remain fascinating amusing and relevant Most of my work in recent decades Rheingold says has focused on the consequences of digital media and networked publics Before the digital wave came along I wrote about a more diverse range of subjects What causes anger What s it like to be in a car crash What s insect sex like Do invisible airborne chemicals affect behavior Can we control our dreams How will people get high in the future Will money evolve into new forms In the second decade of the twenty first century these short pieces re present my explorations during my think about anything years to a wider public who may be familiar with my work on digital culture The Architecture of the Mind Peter Carruthers,2006
