Mouritsen, Luis A. Bagatolli, 2015-10-08 The present book gives a multi disciplinary perspective on the physics of life and the particular role played by lipids fats and the lipid bilayer component of cell membranes The emphasis is on the physical properties of lipid membranes seen as soft and molecularly structured interfaces By combining and synthesizing insights obtained from a variety of recent studies an attempt is made to clarify what membrane structure is and how it can be quantitatively described Furthermore it is shown how biological function mediated by membranes is controlled by lipid membrane structure and organization on length scales ranging from the size of the individual molecule across molecular assemblies of proteins and lipid domains in the range of nanometers to the size of whole cells Applications of lipids in nanotechnology and biomedicine are also described The first edition of the present book was published in 2005 when lipidomics was still very much an emerging science and lipids about to be recognized as being as important for life as proteins sugars and genes This significantly expanded and revised edition takes into account the tremendous amount of knowledge gained over the past decade In addition the book now includes more tutorial material on the biochemistry of lipids and the principles of lipid self assembly The book is aimed at undergraduate students and young research workers within physics chemistry biochemistry molecular biology nutrition as well as pharmaceutical and biomedical sciences From the reviews of the first edition This is a highly interesting book and a pleasure to read It represents a new and excellent pedagogical introduction to the field of lipids and the biophysics of biological membranes I reckon that physicists and chemists as well as biologists will benefit from this approach to the field and Mouritsen shows a deep insight into the physical chemistry of lipids G ran Lindblom Chemistry and Physics of Lipids 2005 vol 135 page 105 106 The book takes the reader on an exciting journey through the lipid world and Mouritsen attracts the attention with a lively style of writing a comprehensive view of the lipid sea can be easily achieved gaining the right perspectives for envisaging future developments in the nascent field of lipidomics Carla Ferreri ChemBioChem Vol 6 8 2005 *The Concise English* Charles Annandale, 1905 **International Law Notes**, 1916 The Inhibition of Fat Oxidation Processes N. Standards Lawrence Busch, 2011-09-16 An investigation into standards the invisible infrastructures of our technical moral social and physical worlds Standards are the means by which we construct realities There are established standards for professional accreditation the environment consumer products animal welfare the acceptable stress for highway bridges healthcare education for almost everything We are surrounded by a vast array of standards many of which we take for granted but each of which has been and continues to be the subject of intense negotiation In this book Lawrence Busch investigates standards as recipes for reality Standards he argues shape not only the physical world around us but also our social lives and even our selves Busch shows how standards are intimately connected to power that they often serve to empower some and disempower others He outlines the history of formal standards and describes how modern science came to be associated with the moral technical project of standardization of both people and things Busch suggests guidelines for developing fair equitable and effective standards Taking a uniquely integrated and comprehensive view of the subject Busch shows how standards for people and things are inextricably linked how standards are always layered even if often addressed serially and how standards are simultaneously technical social moral legal and ontological devices

The Language of Law and Food Salvatore Mancuso, 2021-04-27 This book reconsiders the use of food metaphors and the relationship between law and food in an interdisciplinary perspective to examine how food related topics can be used to describe or identify rules norms or prescriptions of all kinds The links between law and food are as old as the concept of law Many authors have been using such links in creative ways to express specific features of law This is because the language of food and cooking offers legal thinkers and teachers mouth watering metaphors comparing rules to recipes and their combination to culinary processes This collection focuses on this relationship between law and food and takes us far beyond their mere interaction to explore different ways of using these two apparently so diverse elements to describe different phenomena of the legal reality The authors use the link between food and law to describe different aspects of the legal landscape in different areas and jurisdictions Bringing together metaphors and indirect correlations between law and food the book explores different models of approaching legal issues and considering different legal challenges from a completely new perspective in line with the multidisciplinary approach that leads comparative legal studies today and to a certain extent revisiting and enriching it With contributions in English and French the book will be of interest to academics and researchers working in the areas of law and food law and language and comparative legal studies
