The Fifo Blues:

The Fifo Blues Aj Pignat, 2014 John Mancetti is a third generation Italian immigrant who has been employed in the Western Australian resources sector as a construction worker for the last four years. He is one of nearly a hundred thousand Fly In Fly Out FIFO workers that serve the industry by travelling over one thousand five hundred kilometres to and from work by aeroplane. This type of lifestyle is somewhat unique to Western Australia. While life seems to be good in many respects, John eventually becomes a victim of the various stress that are associated with working in the remote Pilbara region of Western Australia. John's family want him to give up his high paid job as a FIFO worker to return to full time employment in Perth. John is very reluctant to change and keeps delaying the decision to do so because he has onerous financial commitments. Through a series of unexpected events, he finally realises that he is suffering from the FIFO Blues.

Designing Network On-Chip Architectures in the Nanoscale Era Jose Flich, Davide Bertozzi, 2010-12-18 Going beyond isolated research ideas and design experiences, *Designing Network On Chip Architectures in the Nanoscale Era* covers the foundations and design methods of network on chip NoC technology. The contributors draw on their own lessons learned to provide strong practical guidance on various design issues. Exploring the design process of the **Contemporary High Performance Computing** Jeffrey S. Vetter, 2017-11-23 *Contemporary High Performance Computing: From Petascale toward Exascale* focuses on the ecosystems surrounding the world's leading centers for high performance computing (HPC). It covers many of the important factors involved in each ecosystem: computer architectures, software, applications, facilities, and sponsors. The first part of the book examines significant trends in HPC systems, including computer architectures, applications, performance, and software. It discusses the growth from terascale to petascale computing and the influence of the TOP500 and Green500 lists. The second part of the book provides a comprehensive overview of 18 HPC ecosystems from around the world. Each chapter in this section describes programmatic motivation for HPC and their important applications: a flagship HPC system overview covering computer architecture, system software, programming systems, storage, visualization, and analytics support, and an overview of their data center facility. The last part of the book addresses the role of clouds and grids in HPC, including chapters on the Magellan, FutureGrid, and LLGrid projects. With contributions from top researchers directly involved in designing, deploying, and using these supercomputing systems, this book captures a global picture of the state of the art in HPC.

Validation of Communications Systems with SDL Laurent Doldi, 2003-09-12 *Validation of Communications Systems with SDL* provides a clear practical guide to validating by simulation a telecom system modelled in SDL. SDL, the Specification and Description Language, standardised by the International Telecommunication Union (ITU-T), is used to specify and develop complex systems such as GSM, GPRS, UMTS, IEEE 802.11, or Hiperlan. Since the downturn in the telecom industry, validating a system before its implementation has become mandatory to reduce costs. This volume guides you step by step through the validation of a simplified protocol layer from interactive simulation to proof of properties using

reachability analysis combined with observers Every step is explained using the two main SDL tools commercially available ObjectGeode™ and Tau SDL™ Suite both from Telelogic Contents Short tutorial on SDL Presentation of the protocol layer case study Interactive simulation MSC generation Scripting automatic non regression Auto matic validation against MSC HMSC etc Random simulation Exhaustive and bit state simulation Errors detected and not detected by simulation Other simulator features This book offers you the opportunity to Learn expert validation techniques and tips Master advanced simulation features of Telelogic ObjectGeode™ and Tau SDL Suite™ Practice 156 hands on exercises with solutions The SDL models and scripts used in the exercises can be downloaded from the Web **The Blue Revolution** Nicholas

Sullivan,2022-04-19 Overfishing For the world s oceans it s long been a worrisome problem with few answers Many of the global fish stocks are at a dangerous tipping point some spiraling toward extinction But as older fishing fleets retire and new technologies develop a better more sustainable way to farm this popular protein has emerged to profoundly shift the balance The Blue Revolution tells the story of the recent transformation of commercial fishing an encouraging change from maximizing volume through unrestrained wild hunting to maximizing value through controlled harvesting and farming Entrepreneurs applying newer smarter technologies are modernizing fisheries in unprecedented ways In many parts of the world the seafood on our plates is increasingly the product of smart decisions about ecosystems waste efficiency transparency and quality Nicholas P Sullivan presents this new way of thinking about fish food and oceans by profiling the people and policies transforming an aging industry into one that is post industrial fueled by sea foodies and locavores interested in sustainable traceable quality seafood Catch quotas can work when local fishers feel they have a stake in the outcome shellfish farming requires zero inputs and restores nearshore ecosystems new markets are developing for kelp products as well as unloved and underutilized fish species Sullivan shows how the practices of thirty years ago that perpetuated an overfishing crisis are rapidly changing In the book s final chapters Sullivan discusses the global challenges to preserving healthy oceans including conservation mechanisms the impact of climate change and unregulated and criminal fishing in international waters In a fast growing world where more people are eating more fish than ever before The Blue Revolution brings encouraging news for conservationists and seafood lovers about the transformation of an industry historically averse to change and it presents fresh inspiration for entrepreneurs and investors eager for new opportunities in a blue green economy **Operating Systems for Supercomputers and High Performance Computing** Balazs

Gerofi,Yutaka Ishikawa,Rolf Riesen,Robert W. Wisniewski,2019-10-15 Few works are as timely and critical to the advancement of high performance computing than is this new up to date treatise on leading edge directions of operating systems It is a first hand product of many of the leaders in this rapidly evolving field and possibly the most comprehensive This new and important book masterfully presents the major alternative concepts driving the future of operating system design for high performance computing In particular it describes the major advances of monolithic operating systems such as

Linux and Unix that dominate the TOP500 list It also presents the state of the art in lightweight kernels that exhibit high efficiency and scalability at the loss of generality Finally this work looks forward to possibly the most promising strategy of a hybrid structure combining full service functionality with lightweight kernel operation With this it is likely that this new work will find its way on the shelves of almost everyone who is in any way engaged in the multi discipline of high performance computing From the foreword by Thomas Sterling Designing SOC's with Configured Cores Steve Leibson,2006-08-15

Microprocessor cores used for SOC design are the direct descendents of Intel's original 4004 microprocessor Just as packaged microprocessor ICs vary widely in their attributes so do microprocessors packaged as IP cores However SOC designers still compare and select processor cores the way they previously compared and selected packaged microprocessor ICs The big problem with this selection method is that it assumes that the laws of the microprocessor universe have remained unchanged for decades This assumption is no longer valid Processor cores for SOC designs can be far more plastic than microprocessor ICs for board level system designs Shaping these cores for specific applications produces much better processor efficiency and much lower system clock rates Together Tensilica's Xtensa and Diamond processor cores constitute a family of software compatible microprocessors covering an extremely wide performance range from simple control processors to DSPs to 3 way superscalar processors Yet all of these processors use the same software development tools so that programmers familiar with one processor in the family can easily switch to another This book emphasizes a processor centric MPSOC multiple processor SOC design style shaped by the realities of the 21st century and nanometer silicon It advocates the assignment of tasks to firmware controlled processors whenever possible to maximize SOC flexibility cut power dissipation reduce the size and number of hand built logic blocks shrink the associated verification effort and minimize the overall design risk An essential no nonsense guide to the design of 21st century mega gate SOC's using nanometer silicon Discusses today's key issues affecting SOC design based on author's decades of personal experience in developing large digital systems as a design engineer while working at Hewlett Packard's Desktop Computer Division and at EDA workstation pioneer Cadnetix and covering such topics as an award winning technology journalist and editor in chief for EDN magazine and the Microprocessor Report Explores conventionally accepted boundaries and perceived limits of processor based system design and then explodes these artificial constraints through a fresh outlook on and discussion of the special abilities of processor cores designed specifically for SOC design Thorough exploration of the evolution of processors and processor cores used for ASIC and SOC design with a look at where the industry has come from and where it's going Easy to understand explanations of the capabilities of configurable and extensible processor cores through a detailed examination of Tensilica's configurable extensible Xtensa processor core and six pre configured Diamond cores The most comprehensive assessment available of the practical aspects of configuring and using multiple processor cores to achieve very difficult and ambitious SOC price performance and power design goals **Brush-up java for Interview** Ashutosh Shashi,2020-08-22

This book will be helpful for those who is preparing for interview or getting interviewed It is specially designed to brush up the java concepts quickly **IBM System Blue Gene Solution Blue Gene/Q Application Development** Megan Gilge, IBM Redbooks, 2014-02-13 This IBM Redbooks publication is one in a series of IBM books written specifically for the IBM System Blue Gene supercomputer Blue Gene Q which is the third generation of massively parallel supercomputers from IBM in the Blue Gene series This document provides an overview of the application development environment for the Blue Gene Q system It describes the requirements to develop applications on this high performance supercomputer This book explains the unique Blue Gene Q programming environment This book does not provide detailed descriptions of the technologies that are commonly used in the supercomputing industry such as Message Passing Interface MPI and Open Multi Processing OpenMP References to more detailed information about programming and technology are provided This document assumes that readers have a strong background in high performance computing HPC programming The high level programming languages that are used throughout this book are C C and Fortran95 For more information about the Blue Gene Q system see IBM Redbooks on page 159 **Embedded Robotics** Thomas Bräunl, 2013-04-17 This textbook covers both mobile robots and embedded systems from introductory to intermediate level It is structured in three parts dealing with embedded systems hardware and software design actuators sensors PID control multitasking mobile robot design driving balancing walking and flying robots and mobile robot applications mapping robot soccer genetic algorithms neural networks behavior based systems and simulation The book is written as a text for courses in computer science computer engineering IT electronic engineering and mechatronics as well as a guide for robot hobbyists and researchers *The Turn of Moore's Law from Space to Time* Liming Xiu, 2022-05-24 This book states that a space induced crisis is recognized as the cause of trouble that Moore s Law is currently facing The contemporary practice of this empirical law can be considered as happening within a space dominant paradigm An alternative of exploiting potential in the dimension of time is identified as an emerging paradigm in microelectronics The new practice is termed a time oriented paradigm It is justified as the turn of Moore s Law from space to time The resultant Time Moore strategy is envisioned as the next generation enabler for continuing Moore s Law s pursuit of everhigher information processing power and efficiency It also serves as the perpetuation of the spirit that Moore s law is nothing but a collective storied history of innovations In the first part of this book by following Thomas Kuhn s seminal work around the concepts of paradigm and scientific revolution the argument for the Time Moore strategy Time Moore to use time more and the paradigm shift from space to time is carried out heavily through philosophical persuasion rather than technical proof due to the difficult challenge of change of mindset The second part of the book provides solid technical materials for supporting this transition from the old paradigm to the new one In short the goal of this book is to reevaluate the contemporary practice of microelectronics identify the cause of the current crisis advocate a change of mindset to circumvent the crisis and ultimately point out a new route for advancing After achieving so many unprecedented

accomplishments through several decades of relentless endeavor it's time for the big ship of Moore's Law i.e. the art of microelectronic system design to make a turn
