*The Quarantine and Certification of Martian Samples* National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on Planetary and Lunar Exploration,2002-05-16 One of the highest priority activities in the planetary sciences identified in published reports of the Space Studies Board s Committee on Planetary and Lunar Exploration COMPLEX and in reports of other advisory groups is the collection and return of extraterrestrial samples to Earth for study in terrestrial laboratories In response to recommendations made in such studies NASA has initiated a vigorous program that will within the next decade collect samples from a variety of solar system environments In particular the Mars Exploration Program is expected to launch spacecraft that are designed to collect samples of martian soil rocks and atmosphere and return them to Earth perhaps as early as 2015 International treaty obligations mandate that NASA conduct such a program

in a manner that avoids the cross contamination of both Earth and Mars The Space Studies Board s 1997 report Mars Sample Return Issues and Recommendations examined many of the planetary protection issues concerning the back contamination of Earth and concluded that although the probability that martian samples will contain dangerous biota is small it is not zero 1 Steps must be taken to protect Earth against the remote possibility of contamination by life forms that may have evolved on Mars Similarly the samples collected at great expense must be protected against contamination by terrestrial biota and other matter Almost certainly meeting these requirements will entail opening the sample return container in an appropriate facility on Earth presumably a BSL 4 laboratory where testing biosafety certification and quarantine of the samples will be carried out before aliquots are released to the scientific community for study in existing laboratory facilities The nature of the required quarantine facility and the decisions required for disposition of samples once they are in it were regarded as issues of sufficient importance and complexity to warrant a study by the Committee on Planetary and Lunar Exploration COMPLEX in isolation from other topics Previous studies have been much broader including also consideration of the mission that collects samples on Mars and brings them to Earth atmospheric entry sample recovery and transport to the quarantine facility The charge to COMPLEX stated that the central question to be addressed in this study is the following What are the criteria that must be satisfied before martian samples can be released from a quarantine facility

**Science Outside the Laboratory** Marcel Boumans, 2015 Social science experiments often cannot be analyzed under controlled conditions as many take place outside a laboratory None the less measurement provides scientists with a sound basis for collecting and analyzing the results of field research Science Outside the Laboratory examines the relationship between measurement theory and field investigations through the philosophy of science **The Athenaeum** ,1863 **The Vacuum Interrupter** Paul G. Slade, 2020-11-29 Title The Vacuum Interrupter Theory Design and Application Shelving guide Electrical Engineering Dr Paul Slade draws from his nearly six decades of active experience to develop this second edition of The Vacuum Interrupter Theory Design and Application This book begins by discussing the design requirements for high

voltage vacuum interrupters and then the contact requirements to interrupt the vacuum arc It then continues by describing the various applications in which the vacuum interrupter is generally utilized Part 1 of this book begins with a detailed review of the vacuum breakdown process It continues by covering the steps necessary for the design and the manufacture of a successful vacuum interrupter The vacuum arc is then discussed including how it is affected as a function of current An overview of the development and use of practical contact materials along with their advantages and disadvantages follows Contact designs that are introduced to control the high current vacuum arc are also analyzed Part 2 on application begins with a discussion of the arc interruption process for low current and high current vacuum arcs It examines the voltage escalation phenomenon that can occur when interrupting inductive circuits The occurrence of contact welding for closed contacts subjected to the passage of high currents and for contacts when closing on high currents is explored The general requirements for the successful manufacture and testing of vacuum circuit breakers is then presented The general application of vacuum interrupters to switch load currents especially when applied to capacitor circuits is also given The interruption of high short circuit currents is presented along with the expected performance of the two major contact designs Owing to the ever increasing need for environmentally friendly circuit protection devices the development and application of the vacuum interrupter will only increase in the future At present the vacuum circuit breaker is the technology of choice for distribution circuits 5kV to 40 5kV It is increasingly being applied to transmission circuits 72 5kV to 242kV In the future its application for protecting high voltage DC networks is assured Audience This is a practical source book for engineers and scientists interested in studying the development and application of the vacuum interrupter Research scientists in industry and universities Graduate students beginning their study of vacuum interrupter phenomena Design engineers applying vacuum interrupters in vacuum switches vacuum contactors vacuum circuit breakers and vacuum contactors It provides a unique and comprehensive review of all aspects of vacuum interrupter technology for those new to the subject and for those who wish to obtain a deeper understanding of its science and application Scientists and engineers who are beginning their research into vacuum breakdown and aspects of the vacuum arc will find the extensive bibliography and phenomenological descriptions to be a useful introduction
