Nuclear Science Abstracts, 1973 Emergency War Plan Sean M. Maloney, 2021-02 2023 AFHF Air Power History Book Prize Winner *Emergency War Plan* examines the theory and practice of American nuclear deterrence and its evolution during the Cold War Previous examinations of nuclear strategy during this time have for the most part categorized American efforts as massive retaliation and mutually assured destruction blunt instruments to be casually dismissed in favor of more flexible approaches or summed up in inflammatory and judgmental terms like MAD These descriptors evolved into slogans and any nuanced discussion of the efficacy of the actual strategies withered due to a variety of political and social factors Drawing on newly released weapons effects information along with new information about Soviet capabilities as well as risky and covert espionage missions *Emergency War Plan* provides a completely new examination of American nuclear deterrence strategy during the first fifteen years of the Cold War the first such study since the 1980s Ultimately what emerges is a

picture of a gargantuan and potentially devastating enterprise that was understood at the time by the public in only the vaguest terms but that was not as out of control as has been alleged and was more nuanced than previously understood **A**

Hardware Track-Trigger for CMS Thomas Owen James, 2019-10-28 The work described in this PhD thesis is a study of a real implementation of a track finder system which could provide reconstructed high transverse momentum tracks to the first level trigger of the High Luminosity LHC upgrade of the CMS experiment This is vital for the future success of CMS since otherwise it will be impossible to achieve the trigger selectivity needed to contain the very high event rates The unique and extremely challenging requirement of the system is to utilise the enormous volume of tracker data within a few microseconds to arrive at a trigger decision The track finder demonstrator described proved unequivocally using existing hardware that a real time track finder could be built using present generation FPGA based technology which would meet the latency and performance requirements of the future tracker This means that more advanced hardware customised for the new CMS tracker should be even more capable and will deliver very significant gains for the future physics returns from the LHC
