held in the Geophysical Institute University of Alaska Fairbanks June 17 28 1991 was we believe the first attempt to bring together geoscientists from all the disciplines related to the solar system where fluid flow is a fundamental phenomenon The various aspects of flow discussed at the meeting ranged from the flow of ice in glaciers through motion of the solar wind to the effects of flow in the Earth's mantle as seen in surface phenomena A major connecting theme is the role played by convection For a previous attempt to review the various ways in which convection plays an important role in natural phenomena one must go back to an early comprehensive study by Wasiutynski in *Astro physica Norvegica* vol 4 1946 This work little known now perhaps was a pioneering study In understanding the evolution of bodies of the solar system from accretion to present day processes ranging from interplanetary plasma to fluid cores the understanding of flow hydrodynamics is essential From the large scale in planetary atmospheres to geological processes such as those seen in magma chambers on the Earth one is dealing with thermal or chemical convection Count Rumford the founder of the Royal Institution studied thermal convection experimentally and realized its practical importance in domestic contexts
