**Comparative Issues in the Governance of Research Biobanks** Giovanni Pascuzzi,Umberto Izzo,Matteo Macilotti,2013-01-30 In the last few years the boom in biobanking has prompted a lively debate on a host of interrelated legal issues such as the Gordian knot of the ownership of biological materials as well as privacy concerns The latter are due to the difficulty of accepting that biological samples must be completely anonymous without making it practically impossible to exploit their information potential The issues also include the delicate role and the changing content of the donor s informed consent as the main legal tool that may serve to link the privacy and property interests of donors with the research interests and the set of principles that should be at the core of the biobanking practice Lastly the IP issues and the patentability of biological samples as well as the protection of databases storing genetic information obtained from the samples are covered Collecting eighteen essays written by eminent scholars from Italy the US the UK and Canada this book provides new solutions to these problems From a comparative viewpoint it explores the extent to which digital technology may assist in tackling the numerous regulatory issues raised by the practice of biobanking for research purposes These issues may be considered and analyzed under the traditional paradigms of Property Privacy Informed Consent and Intellectual Property

**The Organization of Cities** John R Miron,2017-01-20 This book focuses on the relationship between the state and economy in the development of cities It reviews and reinterprets fundamental theoretical models that explain how the operation of markets in equilibrium shapes the scale and organization of the commercial city in a mixed market economy within a liberal state These models link markets for the factors of production markets for investment and fixed capital formation markets for transportation and markets for exports in equilibrium both within the urban economy and the rest of the world In each case the model explains the urban economy by revealing how assumptions about causes and structures lead to predictions about scale and organization outcomes By simplifying and contrasting these models this book proposes another interpretation that governance and the urban economy are outcomes negotiated by political actors motivated by competing notions of commonwealth and the individual desire for wealth and power The book grounds its analysis in economic history explaining the rise of commercial cities and the emergence of the urban economy It then turns to factors of production export and factor markets introducing and parsing the Mills model breaking it down into its component parts and creating a series of simpler models that can better explain the significance of each economic assumption Simplified models are also presented for real estate and fixed capital investment markets transportation and land use planning The book concludes with a discussion of linear programming and the Herbert Stevens and the Ripper Varaiya models A fresh presentation of the theories behind urban economics this book emphasizes the links between state and economy and challenges the reader to see its theories in a new light As such this book will be of interest to scholars students and practitioners of economics public policy public administration urban policy and city and urban planning
