Kelly,G. Matthews,2012-12-06 The discovery of hyperbolic geometry and the subsequent proof that this geometry is just as logical as Euclid s had a profound influence on man s understanding of mathematics and the relation of mathematical geometry to the physical world It is now possible due in large part to axioms devised by George Birkhoff to give an accurate elementary development of hyperbolic plane geometry Also using the Poincare model and inversive geometry the equiconsistency of hyperbolic plane geometry and euclidean plane geometry can be proved without the use of any advanced mathematics These two facts provided both the motivation and the two central themes of the present work Basic hyperbolic plane geometry and the proof of its equal footing with euclidean plane geometry is presented here in terms accessible to anyone with a good background in high school mathematics The development however is especially directed to college students who may become secondary teachers For that reason the treatment is designed to emphasize those aspects of hyperbolic plane geometry which contribute to the skills knowledge and insights needed to teach euclidean geometry with some mastery **Geometry in the Mathematics Curriculum** National Council of Teachers of Mathematics,1973
