**The Great Gatsby**,2011-03 **The Great Gatsby meets Alain Badiou** Ursula Vooght,2023-12-21 The subject of this book is a consideration of the usefulness of the concept of fidelity put forward by the philosopher Alain Badiou in the discussion of film adaptation Fidelity or faithfulness is primarily a consideration that emerges in relation to so called

canonical texts in adaptation Fitzgerald's *The Great Gatsby* occupies a position of global recognisability and within the United States cultural mythology that has triggered strong reactions to the four Hollywood adaptations. The various adaptations allow for the differing approaches to the adaptation of this novel to be meaningfully explored. The film adaptations' paratextual elements will be discussed in order to show how these acted as limiting lenses. The strategies of the films for handling elements of Fitzgerald's prose and themes will be compared across the adaptations. This will culminate in an assertion of the worth of a larger application of a Badiouian fidelity within the field.

Cortical Evolution in Primates  
Steven P. Wise, 2023-12-21 *Cortical Evolution in Primates* provides a stand alone resource for neuroscience graduate students and established neuroscientists who have an interest in cortical evolution and primates. Discussions of both cortical evolution and primates often rely on terms and concepts unfamiliar to many neuroscientists but such readers will have no need to look elsewhere to understand the text or figures in this book. As well as reviewing the pertinent terminology and taxonomy, Wise explores the palaeontology, adaptations and paleoecology of primates. Through summarizing a neglected source of data, fossil primates, the book harnesses the power of comparative neuroanatomy to examine how cortical maps changed during primate evolution, including nine proposals on why the cortex changed. Together, these topics inform a full understanding of cortical evolution in primates. Wise concludes that the cortex expanded more recently than most neuroscientists suspect and it happened many times. Furthermore, cortical expansion occurred independently in several major primate lineages as ancestral primates adapted to the ecosystems of their time and place. Natural selection favored the expansion of cortical areas with neural representations that provided a selective advantage to ancestral primates in those times and those places.

**Step Aside**  
Sarah M. Zerwin, 2024-12-09 All students can drive their own learning when we show them how. Humanized, equitable classrooms start with a commitment to building student agency. *Step Aside* offers clear, streamlined guidance for launching secondary students into high level work that hinges on their ideas and insights. Sarah Zerwin writes from the complex and challenging space of daily life in a classroom. She knows student driven learning does not mean students make all decisions about what happens in the classroom. It occupies a more nuanced space where teachers carefully curate the classroom experience and teach students how to navigate it on their own. Sarah has done the work to weave many resources into a Three Step Meaning Making Process that grows students thinking. Each chapter offers effective, flexible strategies to put into practice immediately: Reading strategies that work for any text students need or want to read; Writing strategies that work for any text students need or want to write; Discussion strategies that students can use to talk things out with others no matter the subject; Assessment strategies that show students how to set goals, track their progress and learn anything they want to learn in their life in or out of school. Especially when we notice our students are struggling, *Step Aside* reminds us we need to hold ourselves accountable for keeping out of the way of the most important work. Our students must read and write and think and discuss on their own to navigate the complexity of their lives.
