

5. A warehouse manager needs to determine the amounts of goods to be sent to three retailers from the three warehouses of the company. Warehouse 1 has a supply of 40 units, Warehouse 2 has 50 units, and Warehouse 3 has 60 units. The demand consists of 50 units for Retailer 1, 70 units for retailer 2, and 30 units for Retailer 3. Given the transportation costs in the table, construct the transportation tableau to minimize the total cost of sending goods from warehouses to retailers.

	Retailer 1	Retailer 2	Retailer 3
Warehouse 1	\$17	\$15	\$18
Warehouse 2	\$14	\$13	\$19
Warehouse 3	\$12	\$14	\$16

- (a) Find a basic feasible solution using the northwest-corner rule and starting with this solution, apply the transportation simplex method to find an optimal solution.
- (b) Find a basic feasible solution using the minimum-cost rule and starting with this solution, apply the transportation simplex method to find an optimal solution.
- (c) Find a basic feasible solution using the Vogel's method and starting with this solution, apply the transportation simplex method to find an optimal solution.
- (d) Compare the number of iterations required in (a)-(c).

## Warehouse Math Tests:

*Testing the Data Warehouse Practicum* Wayne Yadow Doug Vucevic &,2012-08 The quality of a data warehouse DWH is the elusive aspect of it not because it is hard to achieve once we agree what it is but because it is difficult to describe We propose the notion that quality is not an attribute or a feature that a product has to possess but rather a relationship between that product and each and every stakeholder More specifically the relationship between the software quality and the organization that produces the products is explored Quality of data that populates the DWH is the main concern of the book therefore we propose a definition for data quality as fitness to serve each and every purpose Methods are proposed throughout the book to help readers achieve data warehouse quality
