**Modern Marine Internal Combustion Engines** Ievgen Bilousov, Mykola Bulgakov, Volodymyr Savchuk, 2020-06-30 This book offers a comprehensive and timely overview of internal combustion engines for use in marine environments. It reviews the development of modern four stroke marine engines gas and gas diesel engines and low speed two stroke crosshead engines describing their application areas and providing readers with a useful snapshot of their technical features e.g. their dimensions weights cylinder arrangements cylinder capabilities rotation speeds and exhaust gas temperatures. For each marine engine information is provided on the manufacturer historical background development and technical characteristics of the manufacturer's most popular models and detailed drawings of the engine depicting its main design features. This book offers a unique self contained reference guide for engineers and professionals involved in shipbuilding. At the same time it is intended to support students at maritime academies and university students in naval architecture marine engineering with their design projects at both master and graduate levels thus filling an important gap in the literature.

*Carnot Cycle and Heat Engine Fundamentals and Applications* Michel Feidt, 2020-07-03 This book results from a Special Issue related to the latest progress in the thermodynamics of machines systems and processes since the premonitory work of Carnot. Carnot invented his famous cycle and generalized the efficiency concept for thermo mechanical engines. Since that time research progressed from the equilibrium approach to the irreversible situation that represents the general case. This book illustrates the present state of the art advances after one or two centuries of consideration regarding applications and fundamental aspects. The research is moving fast in the direction of economic and environmental aspects. This will probably continue during the coming years. This book mainly highlights the recent focus on the maximum power of engines as well as the corresponding first law efficiency upper bounds.

*Pounder's Marine Diesel Engines and Gas Turbines* Doug Woodyard, 2009-08-18 Since its first appearance in 1950 Pounder's Marine Diesel Engines has served seagoing engineers students of the Certificates of Competency examinations and the marine engineering industry throughout the world. Each new edition has noted the changes in engine design and the influence of new technology and economic needs on the marine diesel engine. Now in its ninth edition Pounder's retains the directness of approach and attention to essential detail that characterized its predecessors. There are new chapters on monitoring control and HiMSEN engines as well as information on developments in electronic controlled fuel injection. It is fully updated to cover new legislation including that on emissions and provides details on enhancing overall efficiency and cutting CO<sub>2</sub> emissions. After experience as a seagoing engineer with the British India Steam Navigation Company Doug Woodyard held editorial positions with the Institution of Mechanical Engineers and the Institute of Marine Engineers. He subsequently edited The Motor Ship journal for eight years before becoming a freelance editor specializing in shipping shipbuilding and marine engineering. He is currently technical editor of Marine Propulsion and Auxiliary Machinery a contributing editor to Speed at Sea Shipping World and Shipbuilder and a

technical press consultant to Rolls Royce Commercial Marine Helps engineers to understand the latest changes to marine diesel engines Careful organisation of the new edition enables readers to access the information they require Brand new chapters focus on monitoring control systems and HiMSEN engines Over 270 high quality clearly labelled illustrations and figures to aid understanding and help engineers quickly identify what they need to know **Mergent International Manual** ,2009

**The Power Supply Industry** Panos Konstantin,Margarete Konstantin,2018-01-11 Power and Energy industry is a highly capital intensive business field Furthermore there is a very close interlinkage between technologies and economics that requires engineering consultants economists and lawyers dealing with investments in this field to have a basic knowledge of the power sector technologies and a common understanding of project evaluation approaches and methodologies The book s overall objective is to provide a comprehensive but concise coverage of power supply technologies and the related economics as required for techno economic evaluation of investments in power and business projects Throughout the book the emphasis is on transferring practical know how rather than pure theoretical knowledge This is also demonstrated in numerous examples derived from experience of respective projects The book comprises eleven chapters 35 tables 100 figures 35 application examples and 10 case studies Target audience of the book are primarily international consultants staff members of engineering companies utility personnel energy economists and lawyers as well as employees of government agencies entrusted with regulating the energy and utility sector and finally students in related fields of engineering and economics
