

The background of the book cover is a photograph of a massive iceberg floating in the ocean. The iceberg's surface is covered in intricate, wavy patterns of ice. A significant portion of the iceberg is submerged, and a waterfall of water is seen cascading down its side into the dark blue water below. The sky is a clear, pale blue.

Water in North American

Environmental History Martin V. Melosi, 2022-06-07 Water in North American Environmental History offers 25 case studies that explore the range of uses and perceptions of water throughout Canadian Mexican and United States history Water has served a myriad of purposes historically as human sustenance agricultural irrigation sanitation fire protection military defense power generation transportation and much more Water and its uses provide an excellent entrance into the study of humans and the environment not only because water is a vital resource for life but also because water as a medium is so intimately woven into the everyday experiences of humans and into society's economic political and social fabric A North American perspective is not representative of the world's water use but it is an area with a linked history and many overlapping human and environmental features and concerns With a continental perspective the book explores many disparate topics without being confined to the history and experiences of just one country The chapters are short but descriptive and departure points for what they tell us about the human experience in dealing with water and the environmental implications of water use The text leads students to consider water in relation to society and to the past The book will be of interest to students of environmental history geography and the environmental sciences China Robert B. Marks, 2011 This deeply informed and beautifully written book provides a comprehensive and comprehensible history of China from prehistory to the present Focusing on the interaction of humans and their environment Robert B Marks traces changes in the physical and cultural world that is home to a quarter of humankind Through both word and image this work illuminates the chaos and paradox inherent in China's environmental narrative demonstrating how historically sustainable practices can in fact be profoundly ecologically unsound The author also reevaluates China's traditional he **Before the UN Sustainable Development Goals** Martin Gutmann, Daniel Gorman, 2022 This volume examines the legacies and historical context of the UN Sustainable Development Goals The complex background of relationships actors and institutions of the several goals are explored in detail by international experts from a range of disciplines *Companion to Environmental Studies* Noel Castree, Mike Hulme, James D. Proctor, 2018-05-01 Companion to Environmental Studies presents a comprehensive and interdisciplinary overview of the key issues debates concepts approaches and questions that together define environmental studies today The intellectually wide ranging volume covers approaches in environmental science all the way through to humanistic and post natural perspectives on the biophysical world Though many academic disciplines have incorporated studying the environment as part of their curriculum only in recent years has it become central to the social sciences and humanities rather than mainly the geosciences The environment is now a keyword in everything from fisheries science to international relations to philosophical ethics to cultural studies The Companion brings these subject areas and their distinctive perspectives and contributions together in one accessible volume Over 150 short chapters written by leading international experts provide concise authoritative and easy to use summaries of all the major and emerging topics dominating the field while the seven part introductions situate and provide context for section entries A gateway to

deeper understanding is provided via further reading and links to online resources Companion to Environmental Studies offers an essential one stop reference to university students academics policy makers and others keenly interested in the environmental question the answer to which will define the coming century

A History of Energy Flows Anthony N. Penna, 2019-09-18 This book presents a global and historical perspective of energy flows during the last millennium The search for sustainable energy is a key issue dominating today's energy regime This book details the historical evolution of energy following the overlapping and slow flowing transitions from one regime to another In doing so it seeks to provide insight into future energy transitions and the means of utilizing sustainable energy sources to reduce humanity's fossil fuel footprint The book begins with an examination of the earliest and most basic forms of energy use namely that of humans metabolizing food in order to work with the first transition following the domestication and breeding of horses and other animals The book also examines energy sources key to development during the industrialization and mechanization such as wood and coal as well as more recent sources such as crude oil and nuclear energy The book then assesses energy flows that are at the forefront of sustainability by examining green sources such as solar wind power and hydropower While it is easy to see energy flows in terms of revolutions transitions have taken centuries to evolve and transitions are never fully global as for example wood remains the primary fuel source for cooking in much of the developing world This book not only demonstrates the longevity of energy transitions but also discusses the possibility for reducing transition times when technological developments provide inexpensive and safe energy sources that can reduce the dependency on fossil fuels This book will be of great interest to students and scholars of energy transitions sustainable energy and environmental and energy history

The Origins of the Modern World Robert B. Marks, 2024-01-02 This clearly written and engrossing book presents a global narrative of the origins of the modern world from 1400 to the present Unlike most studies which assume that the rise of the West is the story of the coming of the modern world this history drawing upon new scholarship on Asia Africa and the New World and upon the maturing field of environmental history constructs a story in which those parts of the world play major roles including their impacts on the environment Robert B Marks defines the modern world as one marked by industry the nation state interstate warfare a large and growing gap between the wealthiest and poorest parts of the world increasing inequality within the wealthiest industrialized countries and an escape from the environmental constraints of the biological old regime He explains its origins by emphasizing contingencies such as the conquest of the New World the broad comparability of the most advanced regions in China India and Europe the reasons why England was able to escape from common ecological constraints facing all of those regions by the end of the eighteenth century a conjuncture of human and natural forces that solidified a gap between the industrialized and non industrialized parts of the world the mounting environmental crisis that defines the modern world and the ways in which the forces of globalization stress the economic and political underpinnings of the modern world Now in a new edition that brings the saga of the modern world to the present in

an environmental context the book considers how and why the United States emerged as a world power in the twentieth century and became the sole superpower by the twenty first century and why the changed relationship of humans to the environment likely will be the hallmark of the modern era the Anthropocene Once again arguing that the US rise to global hegemon was contingent not inevitable Marks also points to the resurgence of Asia and the vastly changed relationship of humans to the environment that may in the long run overshadow any political and economic milestones of the past hundred years

Motor Vehicles, the Environment, and the Human Condition Hans A. Baer, 2019-10-09 The world now has more than a billion motor vehicles and this number continues to increase as developing countries imitate developed societies in their adoption of the culture of automobility This book explores the political ecology of motor vehicles in an era of growing social disparities and environmental crises the latter of which are most manifest in anthropogenic climate change to which motor vehicles constitute a major contributor A political ecological perspective recognizes that motor vehicles perhaps more than any other machine embody the social structural cultural and environmental contradictions of the capitalist world system In addition to highlighting many of the environmental social and health environmental consequences of humanity's increasing reliance on motor vehicles particularly private automobiles this book argues that ultimately we need as a species to move beyond motor vehicles as much as possible but that such an effort will have to be part and parcel of creating an alternative world system based on social justice democratic processes environmental sustainability and a safe climate one termed democratic eco socialism

Societies Past and Present Thomas C. Burr, 2025-09-24 This global and comparative history examines the evolution of human societies over many millennia illuminating patterns within societies today It shows how the original human groups bands of hunter gatherers grew over time into larger and more complex societies through three major transformations settlement and domestication the development of complexity and inequality and industrial globalization The book describes how each of these major changes in economy and political structure created new types of societies villages chiefdoms and other complex societies agrarian states and empires and today's global social system It therefore shows how different types of societies came to co exist and interact on Earth The book compares societies along seven aspects their economies political systems cultural patterns inequalities family structures demographics and environmental patterns It shows that even societies that shared similar basic features still exhibited great variety The comparative framework presented here helps readers develop a conceptual vocabulary for understanding societies the larger social systems within which they exist and the major social changes that led to this continuing expansion

Forest Governance Jessica Stubenrauch, Felix Ekardt, Katharina Hagemann, Beatrice Garske, 2022-04-22 This book analyses and develops overarching concepts for forest policy and forest governance and includes a detailed investigation into the historical discussion on forests It examines opportunities and limits for negative emissions in a sector that like peatlands appears significantly less ambivalent compared to highly technical large scale forms of climate geoengineering The analysis shows

that the binding climate and biodiversity targets under international law are much more ambitious than most people assume. Measured against that the volume critically reviews the potentials of afforestation and reforestation for climate mitigation which is often presented as the new saviour to fulfil the commitments of the Paris Agreement and to reach climate neutrality in the future. It becomes clear that ultimately only biodiverse and thus resilient forests can function as a carbon sink in the long term. The volume shows that the existing European and international forest governance approaches fail to comply with these targets and insights. Furthermore, the book develops a bundle of policy measures. Quantity governance systems for livestock farming, fossil fuels and similar drivers of deforestations represent the most important approach. They are most effective when not directly targeting forests due to their heterogeneity but central damaging factors. With regard to the dominant regulatory and subsidy based governance for forests, we show that it remains necessary to supplement these quantity governance systems with certain easily graspable and thus controllable regulatory and subsidy regulations such as a regulatory protection of old growth forests with almost no exceptions, extension of the livestock to land ratio established in organic farming to all farming, far reaching restriction of bioenergy use to certain residues flanked by import bans and a national and international complete conversion of all agricultural and forest subsidies to public money for public services to promote nature conservation and afforestation in addition to the quantity control systems.

Climate, Catastrophe, and Faith Philip Jenkins, 2021. The author draws out the complex relationship between religion and climate change. He shows that the religious movements and ideas that emerge from climate shocks often last for many decades and become a familiar part of the religious landscape even though their origins in particular moments of crisis may be increasingly consigned to remote memory. Northscapes Dolly Jørgensen, Sverker Sörlin, 2013-11-08. This book argues that the unique environments of the North have been borne of the relationship between humans and nature. Approaching the topic through the lens of environmental history, the contributors examine a broad range of geographies including those of Iceland and other islands in the Northern Atlantic, Sweden, Finland, Russia, the Pacific Northwest and Canada over a time span ranging from CE 800 to 2000. Northscapes is bound together by the intellectual project of investigating the North both as an imagined and mythologized space and as an environment shaped by human technology. The North offers a valuable analytical framework that surpasses nation states and transgresses political and historical borders. This volume develops rich explorations of the entanglements of environmental and technological history in the northern regions of the globe.

Everyday Knowledge, Education and Sustainable Futures Margaret Robertson, Po Keung Eric Tsang, 2016-06-01. Everyday knowledge offers opportunities for better understanding of significant issues of our times. Reflecting these themes, this book places emphasis on community wisdom. The underpinning argument is that our instinctive urge for survival may not be enough if we do not share our collective knowledge and learn more about the everyday habits, beliefs and actions of communities spread across the region. Contributions from researchers active within local communities help build knowledge capacity and support for

collaborative research **Ecosocial Theory, Embodied Truths, and the People's Health** Nancy Krieger, 2021-09-17

From public health luminary Nancy Krieger comes a revolutionary way of addressing health justice and the embodied truths of lived experience. Since the 1700s, fierce debates in medicine and public health have centered around whether sources of ill health can be attributed to either the individual or the surrounding body politic. But what if instead health researchers measure and policies address how people biologically embody their societal and ecological context? *Ecosocial Theory, Embodied Truths, and the People's Health* represents a daring new foray into analyzing how population patterns of health reveal the intersections of lived experience and biology in historical context. Expanding on Nancy Krieger's original ecosocial theory of disease distribution, this volume lays new theoretical groundwork about embodiment and health justice through concrete and novel examples involving pathways such as workplace discrimination, relationship abuse, Jim Crow police violence, pesticides, fracking, green space, and climate change. It offers a crucial counterargument to dominant biomedical and public health narratives attributing causality to either innate biology or decontextualized health behaviors and provides a key step forward towards understanding and addressing the structural drivers of health inequities and health justice. Bridging insights from politics, history, sociology, ecology, biology, and public health, *Ecosocial Theory, Embodied Truths, and the People's Health* presents a bold new framework to transform biomedical and population health thinking, practice, and policies and to advance health equity across a deeply threatened planet.

The Basic Environmental History Mauro Agnoletti, Simone Neri Seneri, 2014-10-15 This book is an introductory instrument to the main themes of environmental history, illustrating its development over time, methodological implications, results achieved, and those still under discussion. But the overriding aspiration is to show that the doubts, methods, and knowledge elaborated by environmental history have a heuristic value that is far from negligible, precisely in its attitude to the most consolidated major historiography. For this reason, this book gives an overview of environmental history as it is an essential component of the basic knowledge of global history. At the same time, it introduces specific aspects which are useful both for anyone wanting to deepen his/her studies of environmental historiography and for those interested in one of the many disciplinary areas, from rural history to urban history, from the history of technology to the history of public health, etc., with which environmental history develops a dialogue.

Portuguese Literature and the Environment Victor K. Mendes, Patrícia Vieira, 2019-06-03 *Portuguese Literature and the Environment* explores the relationship between Portuguese literature and the environment from Medieval times to the present. From the centrality of nature in Medieval poetry through the bucolic verse of the Renaissance all the way to the Romantic and post-Romantic nostalgia for a pristine natural or rural landscape under threat in the wake of industrialization, Portuguese literature has frequently reflected on the connection between humans and the natural world. More recently, the postcolonial turn in contemporary literature has highlighted the contrast between the environment of the former colonies and that of Portugal. Contributors to the collection examine how Portuguese writers engage with the environment and have

incorporated nature in their texts not only to prompt social political or philosophical reflections on human society but also as a way to learn from non humans The book is organized into three sections The first explores the relationship between Portuguese philosophy historiography culture and environmental issues The second section discusses the link between literary texts and the environment from the Renaissance to 1900 The final section analyzes the connection between literary movements or specific authors and environmental change from 1900 to today Scholars of literature Latin American studies literature and environmental studies will find this volume especially useful

Surviving Collapse Christina Ergas, 2021-07-30 As major environmental crises loom Christina Ergas makes the argument in *Surviving Collapse* that one possible way forward is a radical sustainable development that turns the focus from monetary gain to social and ecological regeneration and transformation Employing qualitative and cross national comparative methods Ergas examines two alternative community scale socioecological models of development the first is a grassroots urban ecovillage in the Pacific Northwest United States while the second is a government subsidized but cooperatively run urban farm in Havana Cuba While neither are panaceas they prioritize social and ecological efficiency and subsume economic rationality towards those ends Featuring cases that not only allow us to synthesize their strengths but evaluate their weaknesses *Surviving Collapse* reveals a multitude of varied paths toward reaching radical urban sustainability and empowers us all to imagine and possibly build more resilient futures

The Environment in World History Stephen Mosley, 2023-11-03 Now in its second edition and refreshed by a decade of new research *The Environment in World History* uncovers the deep rooted causes of interconnected climate biodiversity and ecological crises that have brought the environment to the top of the global political agenda in the twenty first century Its expanded chapters and case studies explore a wide range of issues including the following the hunting of wildlife and the loss of biodiversity across the globe deforestation and the development of strategies to protect the world's forests soil degradation caused by worldwide agricultural expansion one of the most profound ways that humans have altered the planet the widening impact of urban industrial growth and the deepening ecological footprints of the world's cities and the rising levels of air land and water pollution as the trade off for continued economic growth worldwide Covering the last five hundred years it offers an essential environmental perspective on well known world history narratives of imperialism and colonialism trade and commerce technological progress and the advance of civilisation Clearly written and fully up to date it is an invaluable resource for all students of world history and environmental studies
