Your drinking water comes from rain or melted snow collected in reservoirs in the Sierra Nevada, Alameda and San Mateo Counties, and a small amount of groundwater. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Collectively these are called contaminants.

Potential Contaminants	Why We Test For It	Likely Source	Your Water Source	
<b>Microbes</b> Microscopic organisms such as Coliform bacteria, Giardia and Cryptosporidium	Can make people sick after drinking several glasses.	Naturally present in the environment or from animals or human activity	Surpasses State and Federal Water Quality Requirements	✓
