Foundations of Sensation and Perception George Mather, 2022-11-30 Foundations of Sensation and Perception offers a comprehensive and accessible introduction to the science of sensation and perception. It covers all the human senses and answers many questions such as why movies are so convincing, how ventriloquism works, why things sound different as you get older, and why you may feel ill in an aircraft or sea vessel. Full of illustrations and graphs that bring concepts to life, the textbook covers vision, hearing, balance, touch, pain, smell, and taste. It discusses each sensory system through its fundamental neuroscience, major perceptual qualities, and underlying coding principles. Each chapter includes reflective questions, key terms, and information boxes, and chapter summaries. Each chapter ends with a tutorial section which introduces more advanced areas of study in an accessible way, including measurement of light and Fourier analysis, as well as topics outside of the mainstream of sensation, including music perception, colour deficiencies, and phantom limbs. The fourth edition of this bestselling textbook includes an extensive update of the text to reflect the latest research, a greater focus on balance and the body senses, and a major reorganisation of the chapters for ease of use. It will be an invaluable resource for a wide range of undergraduate students in psychology, neuroscience, and related disciplines.

Epsilon-Near-Zero Metamaterials Yue Li, Ziheng Zhou, Yijing He, Hao Li, 2022-02-03 This Element introduces the exotic wave phenomena arising from the extremely small optical refractive index and sheds light on the underlying mechanisms, with a primary focus on the basic concepts and fundamental wave physics. The authors reveal the exciting applications of ENZ metamaterials, which have profound impacts over a wide range of fields of science and technology. The sections are organized as follows: in Section 2, the authors demonstrate the extraordinary wave properties in ENZ metamaterials, analyzing the unique wave dynamics and the resulting effects; Section 3 is dedicated to introducing various realization methods of the ENZ metamaterials with periodic and non-periodic styles. The applications of ENZ metamaterials are discussed in Sections 4 and 5 from the perspectives of microwave engineering, optics, and quantum physics. The authors close in Section 6 by presenting an outlook on the development of ENZ metamaterials and discussing the key challenges addressed in future works.

Computational Methods in Multiphase Flow VI Andrea Alberto Mammoli, C. A. Brebbia, 2011 Multiphase flows, which can involve compressible or incompressible linear or nonlinear fluids, are found in all areas of technology at all length scales and flow regimes. In spite of their ubiquitousness, however, multiphase flow continues to be one of the most challenging areas of computational mechanics and experimental methods, with numerous problems remaining unsolved to date. Because the multiphase flow problems are so complex, advanced computational and experimental methods are often required to solve the equations that describe them. The many challenges include modelling nonlinear fluids, modelling and tracking interfaces, dealing with multiple length scales, characterizing phase structures, and treating drop breakup and coalescence. Models must be validated, which requires the use of expensive and difficult experimental techniques. This book presents contributions on the latest research in these

techniques presented at the sixth in a biennial series of conferences on the subject that began in 2001. Featured topics include Bubble and drop dynamics, Flow in porous media, Turbulent flow, Multiphase flow simulation, Image processing, Heat transfer, Interaction of gases, liquids and solids, Interface behaviour, Small scale phenomena, Atomization processes and Liquid film behaviour.

Basic Inorganic Chemistry F. Albert Cotton, Geoffrey Wilkinson, Paul L. Gaus, 1995-01-18 Explains the basics of inorganic chemistry with a primary emphasis on facts then uses the student's growing factual knowledge as a foundation for discussing the important principles of periodicity in structure, bonding and reactivity. New to this updated edition: improved treatment of atomic orbitals and properties such as electronegativity; novel approaches to the depiction of ionic structures; nomenclature for transition metal compounds; quantitative approaches to acid-base chemistry; Wade's rules for boranes and carboranes; the chemistry of major new classes of substances including fullerenes and silenes; plus a chapter on the inorganic solid state.

Spectral and Scattering Theory for Wave Propagation in Perturbed Stratified Media Ricardo Weder, 2012-12-06 The propagation of acoustic and electromagnetic waves in stratified media is a subject that has profound implications in many areas of applied physics and in engineering just to mention a few in ocean acoustics integrated optics and wave guides See for example Tolstoy and Clay 1966 Marcuse 1974 and Brekhovskikh 1980 As is well known stratified media that is to say media whose physical properties depend on a single coordinate can produce guided waves that propagate in directions orthogonal to that of stratification in addition to the free waves that propagate as in homogeneous media When the stratified media are perturbed that is to say when locally the physical properties of the media depend upon all of the coordinates the free and guided waves are no longer solutions to the appropriate wave equations and this leads to a rich pattern of wave propagation that involves the scattering of the free and guided waves among each other and with the perturbation These phenomena have many implications in applied physics and engineering such as in the transmission and reflexion of guided waves by the perturbation interference between guided waves and energy losses in open wave guides due to radiation The subject matter of this monograph is the study of these phenomena Physics of Solar Planetary Environments: Vols.
