

## P. Sci. Waves **Key**

Put all answers on a separate sheet of notebook paper.

1. Mechanical waves need a medium through which to transport energy.
2. The particles in a surface water wave move in a circle (back-&-forth / up & down).
3. Waves in which the particles of medium move at right angles to the direction of the wave are transverse waves.
4. The wavelength of a wave is measured from the crest of one wave to the crest of the next.
5. If the wavelength of a given wave decreases, you know that its frequency will increase.
6. Two waves have the same frequency and wavelength, but the first wave has a greater amplitude. The energy of the first wave greater than that of the second.
7. Wave A has a greater frequency than wave B, but the amplitude of the two waves is the same. The energy of wave A is equal to that of wave B.
8. The unit for frequency is the hertz.
9. A wave will travel only as long as it has energy to carry.
10. When you squeeze together the coils of a spring and then release them, you are creating a compressional wave.
11. Waves in which the particles of the medium move only in the same direction as the motion of the wave are compressional waves.
12. You are creating a wave on a spring. If you start shaking the spring more slowly, the wavelength of the resulting wave will increase.
13. If you are lying on a raft, and you notice that the number of waves that go past the raft increases, you also find that the distance between each crest decreases.
14. Wave A carries more energy than wave B. Wave B has a smaller amplitude than wave A.
15. The energy a wave carries is measured by its amplitude.
16. For a given wave, if the frequency doubles, the wavelength is halved.
17. When a wave passes from a less dense medium to a more dense medium, the speed may change.
18. Repeating disturbances that transfer energy through matter or space are waves.

19. The two types of mechanical waves are transverse and compressional (longitudinal).
20. If the frequency of a water wave changes, its wavelength must also change.
21. The symbol  $\lambda$  (lambda) stands for the wavelength.

Figure 11-1

22. In Figure 11-1, identify the following structures:  
B wavelength, A crest, C amplitude
23. Speed can be determined by dividing the distance traveled by the time. The water waves in a lake travel 4.4 m in 2.0 s. What is the speed of the waves?  $y = d/t$   $v = 4.4\text{m} / 2.0\text{s}$   $v = 2.2\text{ m/s}$
24. An ocean wave has a frequency of 2.0 Hz with a wavelength of 10 m. What is the velocity of the wave?  $v = f \times \lambda$   $v = 2.0\text{ Hz} \times 10\text{ m}$   
 $v = 20\text{ m/s}$

25. The wavelength of the wave in the diagram is 1.5 m.
26. The amplitude of the above wave is 0.5 m.
27. A man is standing on the shore of a beach, up to his knees in water. Every 5 seconds a wave breaks on him. What is the period of the wave? 5 seconds

properties of wave motion      Waves and Oscillations Walter Fox Smith, 2010-05-20 Waves and oscillations permeate virtually every field of current physics research are central to chemistry and are essential to much of engineering Furthermore the concepts and mathematical techniques used for serious study of waves and oscillations form the foundation for quantum mechanics Once they have mastered these ideas in a classical context students will be ready to focus on the challenging concepts of quantum mechanics when they encounter them rather than struggling with techniques This lively textbook gives a thorough grounding in complex exponentials and the key aspects of differential equations and matrix math no prior experience is assumed The parallels between normal mode analysis orthogonal function analysis especially Fourier analysis and superpositions of quantum states are clearly drawn without actually getting into the quantum mechanics An in depth accessible introduction to Hilbert space and bra ket notation begins in Chapter 5 on symmetrical coupled oscillators emphasizing the analogy with conventional dot products and continues in subsequent chapters Connections to current physics research atomic force microscopy chaos supersolids micro electro mechanical systems MEMS magnetic resonance imaging carbon nanotubes and more are highlighted in the text and in end of chapter problems and are frequently updated in the associated website The book actively engages readers with a refreshing writing style and a set of carefully applied learning tools such as in text concept tests your turn boxes in which the student fills in one or two steps of a derivation concept and skill inventories for each chapter and wrong way problems in which the student explains the flaw in a line of reasoning These tools promote self awareness of the learning process The associated website features custom developed applets video and audio recordings additional problems and links to related current research The instructor only part includes difficulty ratings for problems optional hints full solutions and additional support materials      **Arrhythmia**
