It combines latest teaching strategies of transdisciplinarity, phenomenon-based, project-based, and problem-based learning in a unique manner so as to develop 21st-century skills. More specifically, it aims at developing higher-order thinking skills and processes referred to as scientific, creative, and future thinking. It covers core and non-core curriculum domains, multi- and transdisciplinary teaching, as well as designing curricula for the gifted, the able, and students at risk. It applies the latest theories on constructivism and carefully selected tools authentically and relevantly to create interest and challenge, addressing learning from personal, global, and time perspectives. Each chapter highlights a strategy or thinking tool, commencing with theory followed by a unit description and lesson plans. The chapters each end with a final product named the future scenario. This scenario, written by students projecting themselves into the future, is based on accumulated knowledge, summarizes their learning, and illustrates future thinking literacy.
