

Mathematical Equations Answer Sheet

Write the mathematical equation for each of the words describing the units. All units must be in SI units (International System of Units).

Table 1. Mathematical equations and units for each physical quantity.

Physical Quantity	SI Unit	Equation
Length	m	$L = \sqrt{2} \times \sqrt{2} \times \sqrt{2}$
Area	m ²	$A = L^2 = 2 \times 2 \times 2$
Volume	m ³	$V = L^3 = 2 \times 2 \times 2$
Mass	kg	$M = \sqrt{2} \times \sqrt{2} \times \sqrt{2}$
Force	N	$F = M \times a = 2 \times 2 \times 2$
Energy	J	$E = F \times d = 2 \times 2 \times 2$
Power	W	$P = E / t = 2 \times 2 \times 2$
Pressure	Pa	$P = F / A = 2 \times 2 \times 2$
Temperature	K	$T = \sqrt{2} \times \sqrt{2} \times \sqrt{2}$
Time	s	$t = \sqrt{2} \times \sqrt{2} \times \sqrt{2}$
Frequency	Hz	$f = 1 / t = 2 \times 2 \times 2$
Angular Velocity	rad/s	$\omega = \theta / t = 2 \times 2 \times 2$
Angular Acceleration	rad/s ²	$\alpha = \omega / t = 2 \times 2 \times 2$

A Graphical Approach to Precalculus E. John Hornsby,Margaret L. Lial,1999 This book is the culmination of many years of teaching experience with the graphing calculator In it the authors treat the standard topics of precalculus solving analytically confirming graphically and motivating through applications Throughout the first five chapters the authors present the various classes of functions studied in a standard precalculus text Chapter One introduces functions and relations using the linear function as the basis for the presentation In this chapter the authors introduce the following approach which is used throughout the next four chapters after introducing a class of function the nature of its graph is examined then the analytic solution of equations based on that function is discussed Students are then shown how to provide graphical support for solutions using a graphing calculator Having established these two methods of solving equations the authors move on to the analytic methods of solving the associated inequalities Students then learn how the analytic solutions of these inequalities can also be supported graphically Finally once the student has a feel for the particular class of function under consideration the authors use analytic and graphical methods to solve interesting applications involving that function By consistently using this approach with all the different classes of functions students become aware that the authors are always following the same general procedure and just applying that procedure to a new kind of function Throughout the text the authors emphasize the power of technology but provide numerous warnings on its limitations the authors stress that it is only through understanding the mathematical concepts that students can fully appreciate the power of graphing calculators and use technology appropriately

Riemannian Geometry During the Second Half of the Twentieth Century Marcel Berger, 2000 During its first hundred years Riemannian geometry enjoyed steady but undistinguished growth as a field of mathematics In the last fifty years of the twentieth century however it has exploded with activity Berger marks the start of this period with Rauch's pioneering paper of 1951 which contains the first real pinching theorem and an amazing leap in the depth of the connection between geometry and topology Since then the field has become so rich that it is almost impossible for the uninitiated to find their way through it Textbooks on the subject invariably must choose a particular approach thus narrowing the path In this book Berger provides a remarkable survey of the main developments in Riemannian geometry in the second half of the last fifty years One of the most powerful features of Riemannian manifolds is that they have invariants of at least three different kinds There are the geometric invariants topology the metric various notions of curvature and relationships among these There are analytic invariants eigenvalues of the Laplacian wave equations Schrödinger equations There are the invariants that come from Hamiltonian mechanics geodesic flow ergodic properties periodic geodesics Finally there are important results relating different types of invariants To keep the size of this survey manageable Berger focuses on five areas of Riemannian geometry Curvature and topology the construction of and the classification of space forms distinguished metrics especially Einstein metrics eigenvalues and eigenfunctions of the Laplacian the study of periodic geodesics and the geodesic flow Other topics are treated in less detail in a separate section While Berger's survey is not intended for the complete beginner one should already be familiar with notions of curvature and geodesics he provides a detailed map to the major developments of Riemannian geometry from 1950 to 1999 Important threads are highlighted with brief descriptions of the results that make up that thread This supremely scholarly account is remarkable for its careful citations and voluminous bibliography If you wish to learn about the results
