## NICET Highway Construction Level 2 complete guide 2024

What are the 5 types of bridge abutments?

Closed Abutment, Stub or Perched Abutment, Pedestal or Spill-through Abutment, Integral End Bents, Mechanically Stabilized Abutment

What is a "closed abutment"?

A closed abutment is a full-height wall with wing walls on each side that retains the full height of the approach embankment. This type of abutment minimizes the required span length of the bridge.

What is a stub or perched abutment?

A stub or perched abutment is a relatively short abutment that is constructed after the embankment has been completed. The embankment can be compacted without interference from the abutment.

What are Pedestal or spill-through abutments?

Pedestal or spill-through abutments are short stub-type abutments supported on pedestals or columns extending to the natural ground. As with closed abutments, the abutment must be constructed before the approach embankment.

What are Integral End Bents?
