Learning about Shapes, **Beasts Before Us** Elsa Panciroli,2021-06-10 For most of us the story of mammal evolution starts after the asteroid impact that killed the dinosaurs but over the last 20 years scientists have uncovered new fossils and used new technologies that have upended this story In Beasts Before Us palaeontologist Elsa Panciroli charts the emergence of the mammal lineage Synapsida beginning at their murky split from the reptiles in the Carboniferous period over three hundred million years ago They made the world theirs long before the rise of dinosaurs Travelling forward into the Permian and then Triassic periods we learn how our ancient mammal ancestors evolved from large hairy beasts with accelerating metabolisms to exploit miniaturisation which was key to unlocking the traits that define mammals as we now know them Elsa criss crosses the globe to explore the sites where discoveries are being made and meet the people who make them In Scotland she traverses the desert dunes of prehistoric Moray where quarry workers unearthed the footprints of Permian creatures from before the time of dinosaurs In South Africa she introduces us to animals once called mammal like reptiles that gave scientists the first hints that our furry kin evolved from a lineage of egg laying burrowers In China new complete fossilised skeletons reveal mammals that were gliders shovel pawed Jurassic moles and flat tailed swimmers This book radically reframes the narrative of our mammalian ancestors and provides a counterpoint to the stereotypes of mighty dinosaur overlords and cowering little mammals It turns out the earliest mammals weren't just precursors they were pioneers

Advances in Clinical Child Psychology Benjamin B. Lahey,Alan E. Kazdin,2013-11-11 The second volume of Advances in Clinical Child Psychology continues the high standards set by the contributing authors of Volume 1

The series has been most fortunate in attracting authors who lead the field of applied child and developmental psychology in theory research and practice Their chapters bring together advances from a wide variety of sub fields in essays that can legitimately be called major statements Often these integrative chapters prove to be more than the sum of their parts not only bringing together information on the most current topics in the field but pointing to new directions as well Donald Meichenbaum summarized current evidence and theory in his chapter on self control in children The cognitive and behavioral and convenient strategies he outlines offer the promise of effective treatment methods but as he points out much remains to be learned about these methods Robert Wahler and his associates outline a new model for the study of generalization of child treatment effects The model views the family as a system that either supports or inhibits generalization Suggestions for planning treatments within this framework are provided as well as an outline for extending this analysis to other levels of systems

Exploring the Math and Art Connection Daniel Jarvis,Irene Naested,2012 Daniel Jarvis and Irene Naested highlight the natural association between math and art in a series of practical ideas for the classroom because when students understand the math art connection their understanding and confidence increase in both subjects Through innovative teaching strategies and more than 100 rich learning experiences Jarvis and Naested give teachers a wealth of engaging tools to explore the math art connection with their own students This connection is established through examinations of natural and human designed objects from how pine cone scales spiral out in a Fibonacci sequence to how geometric shapes combine in architecture to form some of the most beautiful structures on the planet
