Chemistry for Sustainable Technologies Neil Winterton,2021-02-04 Following the success of the first edition this fully updated and revised book continues to provide an interdisciplinary introduction to sustainability issues in the context of chemistry and chemical technology Its prime objective is to equip young chemists and others to more fully to appreciate defend and promote the role that chemistry and its practitioners play in moving towards a society better able to control manage and ameliorate its impact on the ecosphere To do this it is necessary to set the ideas concepts achievements and challenges of chemistry and its application in the context of its environmental impact past present and future and of the changes needed to bring about a more sustainable yet equitable world Progress since 2010 is reflected by the inclusion of the latest research and thinking selected and discussed to put the advances concisely in a much wider setting historic scientific technological intellectual and societal The treatment also examines the complexities and additional challenges arising from public and media attitudes to science and technology and associated controversies and from the difficulties in reconciling environmental protection and global development While the book stresses the central importance of rigour in the collection and treatment of evidence and reason in decision making to ensure that it meets the needs of an extensive community of students it is broad in scope rather than deep It is therefore appropriate for a wide audience including all practising scientists and technologists

Energy Options Impact on Regional Security Frano Barbir,Sergio Ulgiati,2010-09-02 Energy appears to be a fundamental driving force of economic and political strategies as well as planetary stability Energy related issues such as 1 the availability of new energy sources and viable technologies 2 the disparity in access to energy sources 3 the role of energy in our societies energy societal metabolism 4 the energy support to the life of our cities where about half of world population is going to live very soon and 5 the energy demand for food security all over the world are hot problems that humans will have to face within the framework of sustainability ecologically sound production and consumption patterns associated with socially acceptable life styles in terms of policies technological development and economic processes A coherent energy strategy is required addressing both energy supply and demand security of access development problems equity market dynamics by also taking into account the whole energy lifecycle including fuel production transmission and distribution energy conversion and the impact on energy equipment manufacturers and the end users of energy systems Issues of energy efficiency and rebound effect must also be taken into proper account In the short term the aim should be to achieve higher energy efficiencies and increased supply from local energy sources in particular renewable energy sources

Electric Cars and the Resource Challenge Theo Henckens,2024-08-20 This book is the first to fully explore the short and

long term impact of the global electric car rollout on the supply of raw materials The world has gone from zero to almost 1.5 billion fossil fuel cars in circulation today contributing significantly to the global climate crisis and necessitating a total transition to electric vehicles in the coming decades This book responds to key questions surrounding the increase of electric car usage such as will there be sufficient resources available to permanently supply a future world population of ten billion with electric cars What is the risk that the supply of essential raw materials will be hampered by geopolitical problems or that mining capacity cannot be quickly scaled up How does the switch from fossil fuel vehicles to electric cars impact the recycling of scrap cars It contains detailed information about the material composition of electric and fossil fuel cars in relation to stocks and relative scarcity of corresponding materials in the earth's crust and estimates the ultimate annual consumption of metals based on predicted population growth This book is an important tool for decision makers in national ministries and international bodies highlighting how to adopt a global long term raw materials policy to protect the interests of future generations and global fairness It provides necessary forecasting insight to industry leaders and specialists policymakers and researchers

Integrated Life-Cycle and Risk Assessment for Industrial Processes and Products

Guido Sonnemann, Michael Tsang, Marta Schuhmacher, 2018-10-10 Life cycle assessment is a methodology used to evaluate the environmental impacts of a product process or service during its life cycle and risk assessment is a tool to evaluate potential hazards to human health and the environment introduced by pollutant emissions The United Nations Sustainable Development Goals call for among other objectives responsible consumption and production by decoupling environmental resource use and environmental impacts from economic growth and human well being Life cycle assessment and risk assessment are both analytical system approaches that allow scientists and other decision makers to address these issues and objectives according to the current understanding of environmental mechanisms This book is the first attempt to illustrate the existing interfaces between life cycle assessment and risk assessment and to indicate options for further integration of both tools The second edition Focuses on sustainability Considers new developments in life cycle assessment and environmental risk assessment over the last ten years at the international level Introduces broader concepts and discussions on integrative versus the complementary use of life cycle and risk assessments Extends the scope of integrated life cycle and risk assessments to critical raw materials Includes more case studies and discusses engineered nanomaterials Featuring contributions from leading experts Integrated Life Cycle and Risk Assessment for Industrial Processes and Products is a great reference for graduate students and professionals in environmental management and intends to catalyze communication between life cycle assessment and risk assessment experts and scientists in academia industry and governmental agencies The practical format of the book illustrated with flowcharts examples exercises and concrete applications makes it a useful manual for analyzing situations and making decisions

Critical Minerals, Sustainability, and the Energy Transition in the Global South Susan Nakanwagi, 2024-11-14 This book addresses the relationship between efficient management of critical minerals and sustainability in the Global South, including Sub-Saharan Africa. Critical minerals are essential raw materials for the technologies that are pivotal in today's energy transition. However, critical mineral host states and communities face social, economic, ecological, political, technological and governance injustices. The book contends that the criteria currently used in assessing criticality and critical mineral development do not fulfil the sustainable development ambitions of developing countries and that broader considerations must be taken into account to include the stakeholders involved as well as the spatial dimension of the critical mineral value chain. In particular, the book argues that the law must consider the broader context in which minerals become critical to particular processes. It positions this argument within the current context of climate change, the just energy transition, the minerals energy nexus and geopolitical tensions. By analysing the copper-cobalt value chain through case studies on DRC, Zambia, China and the EU, the book provides new avenues for critical mineral development and acknowledges the necessity for sustainability amidst the exacerbated impacts of climate change. Addressing a key challenge of the global energy transition, the book argues for a just holistic framework which includes parameters such as domestic value addition, human rights in business development, environmental sensitivity, the development of communication channels from remote marginalised communities to international policymakers and the re-designing of criticality considerations beyond supply and economic aspects.

Development and Testing of Vehicle Software and its Influence on Sustainable Transport Antonio Colmenar-Santos, David Borge-Diez, Pedro-Miguel Ortega-Cabezas, 2024-01-10

This book evaluates the contributions of the electronic control unit software of an electric vehicle on sustainability and society such as the reduction of emissions during a product design and the improvements in the vehicle. A sustainable transport model is proposed demonstrating its economic viability. By validating software in a more efficient way and adding new functionalities to the software to enhance driving efficiency, energy consumption can be significantly reduced. Therefore, software validation and development have a significant impact on sustainability. This book offers innovative validation solutions based on artificial intelligence techniques to reduce validation time and emissions. The impact of driving efficiency on sustainable transport models is studied in detail, making proposals to be considered in the current environmental policies under discussion within the European Union in order to improve the sustainability of transport models. Vehicles are becoming sophisticated electronic systems due to the fact that they are integrating a significant number of electronic control units. This trend will certainly continue in the year to come. Consequently, software validation techniques are a key element for car manufacturers in order to ensure the quality of the vehicle. This book contributes to these efforts.
