Network-Oriented Modeling for Adaptive Networks: Designing Higher-Order Adaptive Biological, Mental and Social Network Models Jan Treur,2019-11-01 This book addresses the challenging topic of modeling adaptive networks which often manifest inherently complex behavior Networks by themselves can usually be modeled using a neat declarative and conceptually transparent Network Oriented Modeling approach In contrast adaptive networks are networks that change their structure for example connections in Mental Networks usually change due to learning while connections in Social Networks change due to various social dynamics For adaptive networks separate procedural specifications are often added for the adaptation process Accordingly modelers have to deal with a less transparent hybrid specification part of which is often more at a programming level than at a modeling level This book presents an overall Network Oriented Modeling approach that makes designing adaptive network models much easier because the adaptation process too is modeled in a neat declarative and conceptually transparent Network Oriented Modeling manner like the network itself Thanks to this approach no procedural algorithmic or programming skills are needed to design complex adaptive network models A dedicated software environment is available to run these adaptive network models from their high level specifications Moreover because adaptive networks are described in a network format as well the approach can simply be applied iteratively so that higher order adaptive networks in which network adaptation itself is adaptive second order adaptation too can be modeled just as easily For example this can be applied to model metaplasticity in cognitive neuroscience or second order adaptation in biological and social contexts The book illustrates the

usefulness of this approach via numerous examples of complex higher order adaptive network models for a wide variety of biological mental and social processes The book is suitable for multidisciplinary Master s and Ph D students without assuming much prior knowledge although also some elementary mathematical analysis is involved Given the detailed information provided it can be used as an introduction to Network Oriented Modeling for adaptive networks The material is ideally suited for teaching undergraduate and graduate students with multidisciplinary backgrounds or interests Lecturers will find additional material such as slides assignments and software

Managing Networks in Project-Based Organisations Stephen Pryke, 2017-07-05 The first book demonstrating how to apply the principles of social network analysis to managing complex projects This groundbreaking book gets project managers and students up to speed on state of the art applications of social network analysis SNA for observing analysing and managing complex projects Written by an expert at the leading edge of the SNA project management movement it clearly demonstrates how the principles of social network analysis can be used to provide a smarter more efficient holistic approach to managing complex projects Project managers especially those tasked with managing large complex construction and engineering projects traditionally have relied upon analysis and

decision making based upon hierarchical structures and vaguely defined project systems much of which is borrowed from historic scientific management approaches However it has become apparent that a more sophisticated methodology is required for observing project systems and managing relationships with today s more knowledgeable and demanding clients Social network analysis SNA provides just such an approach Unfortunately existing books on social network analysis are written primarily for sociologists and mathematicians with little or no regard for the needs of project managers until now The first and only book of its kind Managing Networks in Project Based Organisations Offers a framework and a fully developed approach to applying SNA theory and methodologies to large complex projects Describes highly effective strategies and techniques for managing the iterative and transient relationships between network defining actor roles involved in the delivery of complex projects Uses numerous real world examples and case studies of successful applications of SNA to large scale construction and engineering projects around the world Draws on its author s decades of experience managing complex projects for demanding clients as well as his extensive academic research in Project Management Managing Networks in Project Based Organisations is an important working resource for project management professionals and consultants especially those serving the construction and engineering industries It is also an excellent text reference for postgraduate students of project management and supply chain management as well as academic researchers of project management
