Rethinking Moral Status Steve Clarke,Hazem Zohny,Julian Savulescu,2021-08-05 Common sense morality implicitly assumes that reasonably clear distinctions can be drawn between the full moral status that is usually attributed to ordinary adult humans the partial moral status attributed to non human animals and the absence of moral status which is usually ascribed to machines and other artifacts These implicit assumptions have long been challenged and are now coming under further scrutiny as there are beings we have recently become able to create as well as beings that we may soon be able to create which blur the distinctions between human non human animal and non biological beings These beings include non human chimeras cyborgs human brain organoids post humans and human minds that have been uploaded into computers and onto the internet and artificial intelligence It is far from clear what moral status we should attribute to any of these beings There are a number of ways we could respond to the new challenges these technological developments raise we might revise our ordinary assumptions about what is needed for a being to possess full moral status or reject the assumption that there is a sharp distinction between full and partial moral status This volume explores such responses and provides a forum for philosophical reflection about ordinary presuppositions and intuitions about moral status

Individual Differences in Typical and Atypical Development Daniela Bulgarelli,Anne Henning,Paola Molina,2017-09-13
The current book addresses the development of mental state understanding in children with typical and atypical population
and reports new suggestions about the way to evaluate it and to support it through training The presented frame is
multifaceted In respect to typical populations the role of maternal reflective functioning language communication and
educational contexts has been deepened and the association with internalizing externalizing behaviors performances in
spatial tasks and pragmatics has been addressed as well As to atypical populations deficits in mental states understanding
are reported for children with different developmental disorders or impairments as the agenesis of the corpus callosum Down
Syndrome preterm birth Autism Spectrum Disorder hearing impairment and personality difficulties such as anxiety Overall
the papers collected in our book allow a better understanding of the mechanisms influencing mental state understanding and
the effects of mental state comprehension on development **Interval Timing and Time-Based Decision Making**

Warren H. Meck,Valérie Doyère,Agnes Gruart,2012-05-01 The perception of time is crucial for everyday activities from the
sleep wake cycle to playing and appreciating music verbal communication to the determination of the value of a particular
behavior With regard to the last point making decisions is heavily influenced by the duration of the various options the
duration of the expected delays for receiving the options and the time constraints for making a choice Recent advances
suggest that the brain represents time in a distributed manner and reflects time as a result of temporal changes in network
states and or by the coincidence detection of the phase of different neural populations Moreover intrinsic oscillatory
properties of neural circuits could determine timed motor responses This Research Topic partly an emergence of a Satellite
EBBS meeting sponsored by the COST Action TIMELY will discuss how time in the physical world is reconstructed distorted
