Bioelectrochemistry IV Bruno Andrea Melandri, Giulio Milazzo, Martin Blank, 2012-12-06 by G MILAZZO and M BLANK
This book contains the lectures of the fourth advanced course Bioelectrochemistry W Nerve Muscle Function Bioelectrochemistry Mechanisms Energetics and Control which took place at the Majorana Center in Erice Italy October 20th to November 1 1991. The scope of the course was international in terms of both sponsorship and participation. Sponsors included the Bioelectrochemical Society NATO International Union of Pure and Applied Biophysics IUPAB the World Federation of Scientists and the Italian National Research Council. One third of the sixty participants were from Italy but the majority came from eighteen other nations. Since the course was part of the International School of Biophysics the biophysical point of view was emphasized in integrating the biology with the electrochemistry. Lecturers were asked to use a quantitative approach with accepted standards and proper units since this is absolutely essential for developing an effective common language for communication across disciplines. Participants were also urged not to forget that biological systems could also be considered as physical systems. Ion channels are proteins and their properties as polyelectrolytes contribute to the specific biological properties. The existence of families of channels with very similar structures but different selectivities suggests that the specificities arise from slight variations of a general basic design. These perspectives on nerve muscle function helped to make the school course a unique treatment of the subject. **Neurology in Africa** William P.
