Heat stroke is an acute, life-threatening emergency characterized clinically by elevated body temperature and central nervous system dysfunction. Early recognition and treatment including aggressive cooling and management of life-threatening systemic complications are essential to reduce morbidity and mortality. This case report describes two Danish patients diagnosed with heat stroke syndrome during a heat wave in the summer of 2014. Both patients were morbidly obese and had several predisposing illnesses. However since heat stroke is a rare condition in areas with temperate climate, they were not diagnosed until several days after admittance; hence treatment with cooling was delayed. Both patients were admitted to the intensive care unit, where they were treated with an external cooling device and received treatment for complications. Both cases ended fatally. As global warming continues, more heat waves will occur in previously cooler regions. Therefore it is important to raise awareness of heat stroke since outcome depends on early recognition and rapid cooling.

1. Introduction

Classic heat stroke (HS) is an unusual diagnosis in countries with temperate climate. However, as global warming has resulted in a higher frequency of heat waves, an increase in weather-related heat deaths is seen [1–5].

Heat illnesses cover a spectrum of syndromes culminating with the acute, life-threatening emergency of HS that carries a high mortality [2, 3, 6–12]. HS is traditionally defined as a high core temperature accompanied by encephalopathy [6, 10–13]. An alternative definition that takes into consideration the pathophysiology is gaining recognition. This defines HS as hyperthermia associated with a systemic inflammatory response leading to multiorgan dysfunction in which encephalopathy predominates [11, 14].

Two forms of HS are recognized. Exertional HS primarily affects young and healthy athletic patients exercising vigorously in hot and humid climates until the body's normal thermoregulatory mechanisms are overwhelmed. Exertional

HS is characterized by rapid onset and is frequently associated with a high core temperature [2, 3, 6, 7, 9, 10, 12, 13, 15].

Classic (passive or nonexertional) HS is caused by environmental exposure and occurs in young children, in elderly patients or in patients with underlying chronic illnesses, who are exposed to extreme environmental conditions. Classic HS can develop slowly over several days [2, 3, 7, 9, 10, 12, 13, 15].

HS occurs when the body ceases to dissipate heat adequately because of extreme environmental conditions or increased endogenous heat production [15]. When the body's thermoregulatory mechanisms are exceeded and fail, a variable degree of organ failure may occur [15]. Furthermore complex immunological and inflammatory processes that resemble SIRS (systemic inflammatory response syndrome) contribute to the illness [2, 3, 6, 10–14]. Rapid diagnosis and prompt cooling are pivotal, since the condition triggers a cascade of metabolic events that may progress to irreversible injury or death [2, 4, 6, 13]. In-hospital mortality for classical HS ranges from 10 to 65% [2].

Neurobiology of Hyperthermia Hari Shanker Sharma, 2011-09-22 The effects of global warming on human health factors with special regards to our brain function are still not well understood There is an urgent need to expand our knowledge on the effects of hot environment on our brain functions in healthy and in diseased populations It is still unclear whether infectious events traumatic injuries metabolic diseases carcinogenic events cardiovascular and respiratory functions will be adversely affected by the rise in global temperature or whether environmental pollutants such as nanoparticles entered into our body system will produce more damage at high ambient temperatures This book aims to answer these questions based on recent research carried out by top experts in the field from the USA 11 chapters Europe 8 chapters the Middle East 3 chapters Asia 2 chapters and Canada 1 These chapters are written in review style and embedded with the author's new and original data in relation to the current knowledge in the field The book is highly interesting to the first time readers beginners and students alike as well as provides

in depth knowledge to the professionals In addition prospects for future research and recommendations are clearly indicated in each chapter for future growth of the subject in this highly emerging new discipline Describes the importance of brain temperature and hyperthermia in disease processes Presents research on the first observations on Nanoparticles that worsen the outcome of hyperthermia Discusses the effects of hyperthermia on the blood brain and blood cerebrospinal fluid barriers

Developmental Neuropathology Reinhard L. Friede, 2012-12-06 I was gratified by the most favorable reception and wide usage received by the first edition of this book A decade seems to be a short period for a book on pathology and yet it witnessed many important changes of concepts along with a formidable growth of knowledge The second edition required extensive reorganization There are new chapters on mitochondriopathies on peroxisomal diseases and on spongy myelino pathies Major revisions and new additions were necessary in many chapters for instance those on the dysplasias of the cerebral and of the cerebellar hemispheres which were largely reorganized The chapters on perinatal pathology were reordered and reorganized to give a more logical sequence of prenatal perinatal and postnatal lesions The entire text was worked over for brevity A wealth of new references was added with the aim of staying abreast with the literature up to summer 1988 All refer ences were double checked for errors My gratitude goes to Mrs Gisela Ropte and Mrs Cynthia Bunker for their untiring diligent help As a result this second edition is an essentially rewritten text Advance in the prevention of human suffering is based on a thorough understand ing of the nature of disease I hope that this text will continue to be of service in this behalf Perhaps it may also reflect and foster the intellectual curiosity which makes the reading of brains so interesting an occupation Gottingen 1989 Reinhard L
