Neurotology What Do I Do Now:

Neurotology Darius Kohan, Selena Heman-Ackah, Sujana Chandrasekhar, 2014-10-09 This text provides a concise yet comprehensive review of common neurologic disorders. The pathophysiology, presentation, diagnosis, and management of these entities is discussed in detail in a clear, easy-to-understand format. The focus is on patients presented with vertigo, disequilibrium, hearing loss, pulsatile and non-pulsatile tinnitus, facial nerve weakness, and complications of the otitis media. Vascular tumors and anomalies, trauma to the temporal bone, Meniere's disease, as well as cerebellopontine lesions such as vestibular schwannoma and meningioma will be discussed with special emphasis on clinical applications. The appropriate diagnostic work up and treatment options, as well as controversies, will be discussed in the context of evidence-based medicine and best practice approach. Judicious use of MRI, CT scanning, and audio vestibular testing relevant for each pathology is discussed in detail. Appropriate illustrations and tables will summarize algorithms and protocols for managing these disorders, making this text an easy-to-digest medical resource. A comprehensive reference list is provided. **The New Neurotology** Pedro Luiz Mangabeira Albernaz, Francisco Zuma e Maia, Sergio Carmona, Renato Valério Rodrigues Cal, Guillermo Zalazar, 2019-04-05 Neurotology is a branch of medicine that focuses on diagnosing and treating neurological conditions of the inner ear and related structures. There have been many recent advances in neurotology that have been published in general medicine, otolaryngology, and neurology journals. This comprehensive book will aggregate this information to provide a more complete picture of the state of the field and will include the authors' own clinical experience. There is a recent marked increase in interest in neurotology manifested by the clinical experiences and research publication work of otolaryngologists, neurologists, neuro-ophthalmologists, audiologists, and physiotherapists. As a result, this will be a completely state-of-the-art work that includes all up-to-date neurophysiological data related to the vestibular system. It has been estimated that 10% of patients that present at an emergency clinic have vestibular disorders, including vertigo, and these disorders are frequently a cause of falls in elderly patients. On the other hand, many physicians treat their patients with vertigo with vestibular blockers which treat the symptoms but do not cure the disorders. We feel that it is important to supply a source of information on the vestibular system and balance disorders, and this title will do that in a comprehensive manner. This title will be an ideal reference for the diagnosis and treatment of vestibular disorders for otolaryngologists, neurologists, neuro-ophthalmologists, audiologists, and physical therapists. **Emergency Neurology** Sara LaHue MD, Morris Levin MD, 2021-03-19 Part of the What Do I Do Now series, *Emergency Neurology* uses a case-based approach to cover challenging cases for clinicians caring for patients with urgent neurologic illnesses, addressing difficult questions of diagnosis and treatment. Gurin, Daniel M. Torres, 2020 Abstract Concussion is a type of mild traumatic brain injury is common and occurs both in sport and as a result of falls or accidents Concussion has become an increasingly recognized public health concern largely driven by prominent media coverage of athletes who have sustained concussion Although much has been written about this condition we still do not understand its natural history and we are only now beginning to recognize that concussion often manifests in different clinical domains These may require targeted treatment in and of themselves otherwise persistent postconcussive symptoms may develop Although most individuals who sustain a concussion recover and although concussion is a treatable condition it is important that concussion be managed early and comprehensively to avoid a more prolonged clinical trajectory A relatively recent term often used in the setting of concussion is repetitive head impact

exposure a biomechanical force applied to the head that does not generate a clinical manifestation of concussion but may result in structural brain changes Although it is often assumed that repetitive head impact exposure leads to long term neurological sequelae the science to document this assumption is in its infancy Repeated concussions may lead to depression or cognitive impairment later in life and there is an emerging literature that repeated concussion and repetitive head impact exposure are associated with chronic traumatic encephalopathy or other neurodegenerative diseases Currently there is no known causal connection between concussion repetitive head impact exposure and neurodegeneration although this research is also still in its infancy What is clear is that a concussion prevention and safety should be paramount in sport and in society b concussion management should begin immediately and should include clinical domains and c research on concussion and repetitive head impact exposure must continue to move forward Keywords concussion mild traumatic brain injury clinical domains repetitive head impact exposure chronic traumatic encephalopathy safety **Movement Disorders** Richard A.
