The American Booksellers Guide ,1874 A Guide to the Literature on Semirings and their Applications in Mathematics and Information Sciences K. Glazek,2013-06-29 This volume presents a short guide to the extensive literature concerning semirings along with a complete bibliography The literature has been created over many years in variety of languages by authors representing different schools of mathematics and working in various related fields In many instances the terminology used is not universal which further compounds the difficulty of locating pertinent sources even in this age of the Internet and electronic dissemination of research results So far there has been no single reference that could guide the interested scholar or student to the relevant publications This book is an attempt to fill this gap My interest in the theory of semirings began in the early sixties when together with Bogdan W glorz I tried to investigate some algebraic aspects of compactifications of topological spaces semirings of semicontinuous functions and the general ideal theory for special semirings Unfortunately local algebraists in Poland told me at that time that there was nothing interesting in investigating semiring theory because ring theory was still being developed However some time later we became aware of some similar investigations having already been done The theory of semirings has remained my first love ever since and I have been interested in the results in this field that have been appearing in literature even though I have not been active in this area myself

User-Centred Requirements for Software Engineering Environments David J. Gilmore,Russel L. Winder,Francoise Detienne,2013-06-29 The idea for this workshop originated

when I came across and read Martin Zelkowitz's book on Requirements for Software Engineering Environments the proceedings of a small workshop held at the University of Maryland in 1986. Although stimulated by the book I was also disappointed in that it didn't adequately address two important questions: Whose requirements are these and Will the environment which meets all these requirements be usable by software engineers. And thus was the decision made to organise this workshop which would explicitly address these two questions. As time went by setting things up it became clear that our workshop would happen more than five years after the Maryland workshop and thus at the same time as addressing the two questions above this workshop would attempt to update the Zelkowitz approach. Hence the workshop acquired two halves: one dominated by discussion of what we already know about usability problems in software engineering and the other by discussion of existing solutions, technical and otherwise, to these problems. This scheme also provided a good format for bringing together those in the HeI community concerned with the human factors of software engineering and those building tools to solve acknowledged but rarely understood problems.
