**Quality Assurance for Chemistry and Environmental Science** Günther Meinrath, Petra Schneider, 2007-09-18

Metrology and its applications e.g. in chemical or food analysis or in environmental monitoring are entering our daily life. This book provides a basic overview over the relevant metrological concepts like traceability, ISO uncertainties or cause and effect diagrams. The applications described in great detail range from progression of error type evaluation of the measurement uncertainty budget to complex applications like pH measurement or speciation calculations for aqueous solutions. The consequences of a measurement uncertainty concept for chemical data are outlined for geochemical modeling applied to transport in the subsurface and to nuclear waste disposal. Special sections deal with the deficits of existing thermodynamic data for these applications and with the current position of chemical metrology in respect to other quality assurance measures e.g. ISO 9000, GLP, European and U.S. American standards.

Currently, students are interested in more than one thing at the same time, preferring to use visuals and infographics rather than writing in the learning process. In addition, these students use technology better in the education process as in all aspects of daily life as they meet technology at an earlier age than their teachers. Therefore, teachers should also update themselves according to these learner characteristics. In particular, assessment and evaluation are two of the topics that students may not enjoy to their fullest extent. This book serves to make the assessment process fun and interactive as well as to inform teachers about the different applications they can do in this process. It invites teachers to introduce highly interactive applications and make their classes active in the learning process.
