XIII Mediterranean Conference on Medical and Biological Engineering and Computing 2013 Laura M. Roa Romero,2013-10-01 The general theme of MEDICON 2013 is Research and Development of Technology for Sustainable Healthcare This decade is being characterized by the appearance and use of emergent technologies under development This situation has produced a tremendous impact on Medicine and Biology from which it is expected an unparalleled evolution in these disciplines towards novel concept and practices The consequence will be a significant improvement in health care and well fare i e the shift from a reactive medicine to a preventive medicine This shift implies that the citizen will play an important role in the healthcare delivery process what requires a comprehensive and personalized assistance In this context society will meet emerging media incorporated to all objects capable of providing a seamless adaptive anticipatory unobtrusive and pervasive assistance The challenge will be to remove current barriers related to the lack of knowledge required to produce new opportunities for all the society while new paradigms are created for this

inclusive society to be socially and economically sustainable and respectful with the environment In this way these proceedings focus on the convergence of biomedical engineering topics ranging from formalized theory through experimental science and technological development to practical clinical applications *Medical Image Computing and Computer Assisted Intervention - MICCAI 2021* Marleen de Bruijne,Philippe C. E. Cawkell,1991 *Current and Future Role of Artificial Intelligence in Cardiac Imaging, Volume II* Steffen Erhard Petersen,Alistair A. Young,Tim Leiner,Karim Lekadir,2023-10-30 Our first Research Topic entitled Current and Future Role of Artificial Intelligence in Cardiac Imaging provided comprehensive reviews of the recent advances and potential impact of AI for a range of cardiac imaging applications and remains available as an e book to download at no cost Since this first set of publications the field has moved at pace and it is timely to now invite further up to date and topical reviews but importantly original research articles via our Research Topic Current and Future Role of Artificial Intelligence in Cardiac Imaging 2 0 4D Modeling and Estimation of Respiratory Motion for Radiation Therapy Jan Ehrhardt,Cristian Lorenz,2013-05-30 Respiratory motion causes an important uncertainty in radiotherapy planning of the thorax and upper abdomen The main objective of radiation therapy is to eradicate or shrink tumor cells without damaging the surrounding tissue by delivering a

high radiation dose to the tumor region and a dose as low as possible to healthy organ tissues Meeting this demand remains a challenge especially in case of lung tumors due to breathing induced tumor and organ motion where motion amplitudes can measure up to several centimeters Therefore modeling of respiratory motion has become increasingly important in radiation therapy With 4D imaging techniques spatiotemporal image sequences can be acquired to investigate dynamic processes in the patient s body Furthermore image registration enables the estimation of the breathing induced motion and the description of the temporal change in position and shape of the structures of interest by establishing the correspondence between images acquired at different phases of the breathing cycle In radiation therapy these motion estimations are used to define accurate treatment margins e g to calculate dose distributions and to develop prediction models for gated or robotic radiotherapy In this book the increasing role of image registration and motion estimation algorithms for the interpretation of complex 4D medical image sequences is illustrated Different 4D CT image acquisition techniques and conceptually different motion estimation algorithms are presented The clinical relevance is demonstrated by means of example applications which are related to the radiation therapy of thoracic and abdominal tumors The state of the art and perspectives are shown by an insight into the current field of research The book is addressed to biomedical engineers medical physicists researchers and physicians working in the fields of medical image analysis radiology and radiation therapy
