**Quantification of Regional Myocardial Deformation. Normal Characteristics and Clinical Use in Ischaemic Heart Disease** Lieven Herbots,2006 **N-Acetylaspartate** John Moffett,Suzannah B. Tieman,Daniel R. Weinberger,Joseph T. Coyle,Aryan M. A. Namboodiri,2006-10-21 N acetylaspartate or NAA is the acetylated form of the amino acid aspartate and it is present exclusively in the nervous system Indeed NAA is one of the most highly concentrated chemicals found in the brain of humans and animals and yet the functions served by this brain specific metabolite remain elusive and controversial Despite the uncertainties surrounding the functions of NAA in the development and operation of the nervous system this molecule has attracted the attention of researchers and clinicians for two distinct reasons First the acetyl proton on NAA gives off a very prominent signal in water suppressed proton magnetic resonance spectroscopy MRS which permits clinicians to monitor levels of NAA in the brains of patients in a non invasive manner Because NAA is found

primarily in neurons and because the levels in the brain have been found to change rapidly after injury or slowly during neurodegenerative diseases MRS has become a preferred method of analyzing nerve cell dysfunction and death without surgical intervention The second reason that NAA has attracted attention in recent years is that a congenital genetic disorder of NAA metabolism has been found to be the cause of the neurodegenerative disorder known as Canavan's disease Canavan's disease is an inherited leukodystrophy that involves myelination pathologies of cortical white matter leading to death within 10 years of birth The genetic mutation results in a defective enzyme that deacetylates NAA in the brain resulting in a significant rise in NAA levels in the brain and urine This enzyme known as aspartoacylase ASPA appears to be involved in the process of myelination such that a defective enzyme results in a disruption of the myelination of nerve fibers during development The purpose of this symposium is to bring together investigators from around the world who are interested in the study of NAA and the roles it plays in neuronal development and functioning It is hoped that bringing researchers and clinicians together in such a forum will facilitate rapid progress in this emerging field and will help lead to discoveries that can alleviate the suffering caused by a deadly inheritable infantile disease

**Medical Image Computing and Computer-Assisted Intervention - MICCAI 2003** Randy E. Ellis, Terry M. Peters, 2003-10-29 The 6th International Conference on Medical Imaging and Computer Assisted Intervention MICCAI2003 was held in Montréal, Québec, Canada at the Fairmont Queen Elizabeth Hotel during November 15–18, 2003. This was the first time the conference had been held in Canada. The proposal to host MICCAI 2003 originated from discussions within the Ontario Consortium for Image Guided Therapy and Surgery, a multi institutional research consortium that was supported by the Government of Ontario through the Ontario Ministry of Enterprise Opportunity and Innovation. The objective of the conference was to offer clinicians and scientists a forum within which to exchange ideas in this exciting and rapidly growing field. MICCAI 2003 encompassed the state of the art in computer assisted interventions, medical robotics and medical image processing, attracting experts from numerous multidisciplinary professions that included clinicians and surgeons, computer scientists, medical physicists and mechanical, electrical and biomedical engineers. The quality and quantity of submitted papers were most impressive. For MICCAI 2003 we received a record 499 full submissions and 100 short communications. All full submissions of 8 pages each were reviewed by up to 5 reviewers and the 2 page contributions were assessed by a small subcommittee of the Scientific Review Committee. All reviews were then considered by the MICCAI 2003 Program Committee resulting in the acceptance of 206 full papers and 25 short communications. The normal mode of presentation at MICCAI 2003 was as a poster; in addition 49 papers were chosen for oral presentation.

**Intraoperative Imaging and Image-Guided Therapy** Ferenc A. Jolesz, 2014-01-14 Image guided therapy (IGT) uses imaging to improve the localization and targeting of diseased tissue and to monitor and control treatments. During the past decade image guided surgeries and image guided minimally invasive interventions have emerged as advances that can be used in place of traditional invasive approaches. Advanced imaging technologies such as magnetic

resonance imaging MRI computed tomography CT and positron emission tomography PET entered into operating rooms and interventional suites to complement already available routine imaging devices like X ray and ultrasound At the same time navigational tools computer assisted surgery devices and image guided robots also became part of the revolution in interventional radiology suites and the operating room Intraoperative Imaging and Image Guided Therapy explores the fundamental technical and clinical aspects of state of the art image guided therapies It presents the basic concepts of image guidance the technologies involved in therapy delivery and the special requirements for the design and construction of image guided operating rooms and interventional suites It also covers future developments such as molecular imaging guided surgeries and novel innovative therapies like MRI guided focused ultrasound surgery IGT is a multidisciplinary and multimodality field in which teams of physicians physicists engineers and computer scientists collaborate in performing these interventions an approach that is reflected in the organization of the book Contributing authors include members of the National Center of Image Guided Therapy program at Brigham and Women s Hospital and international leaders in the field of IGT The book includes coverage of these topics Imaging methods guidance technologies and the therapy delivery systems currently used or in development Clinical applications for IGT in various specialties such as neurosurgery ear nose and throat surgery cardiovascular surgery endoscopies and orthopedic procedures Review and comparison of the clinical uses for IGT with conventional methods in terms of invasiveness effectiveness and outcome Requirements for the design and construction of image guided operating rooms and interventional suites

Roa Romero, 2013-10-01 The general theme of MEDICON 2013 is Research and Development of Technology for Sustainable Healthcare This decade is being characterized by the appearance and use of emergent technologies under development This situation has produced a tremendous impact on Medicine and Biology from which it is expected an unparalleled evolution in these disciplines towards novel concept and practices The consequence will be a significant improvement in health care and well fare i.e. the shift from a reactive medicine to a preventive medicine This shift implies that the citizen will play an important role in the healthcare delivery process what requires a comprehensive and personalized assistance In this context society will meet emerging media incorporated to all objects capable of providing a seamless adaptive anticipatory unobtrusive and pervasive assistance The challenge will be to remove current barriers related to the lack of knowledge required to produce new opportunities for all the society while new paradigms are created for this inclusive society to be socially and economically sustainable and respectful with the environment In this way these proceedings focus on the convergence of biomedical engineering topics ranging from formalized theory through experimental science and technological development to practical clinical applications     **Medical Image Computing and Computer-Assisted Intervention -- MICCAI 2010** Tianzi Jiang, Nassir Navab, Josien P.W.

Pluim, Max A. Viergever, 2010-09-21 The 13th International Conference on Medical Image Computing and Computer Assisted Intervention MICCAI 2010 was held in Beijing China from 20-24 September 2010

The venue was the China National Convention Center CNCC China's largest and newest conference center with excellent facilities and a prime location in the heart of the Olympic Green adjacent to characteristic constructions like the Bird's Nest National Stadium and the Water Cube National Aquatics Center. MICCAI is the foremost international scientific event in the field of medical image computing and computer-assisted interventions. The annual conference has a high scientific standard by virtue of the threshold for acceptance and accordingly MICCAI has built up a track record of attracting leading scientists, engineers, and clinicians from a wider range of technical and biomedical disciplines. This year we received 786 submissions, well in line with the previous two conferences in New York and London. Three program chairs and a program committee of 31 scientists all with a recognized standing in the field of the conference were responsible for the selection of the papers. The review process was set up such that each paper was considered by the three program chairs, two program committee members, and a minimum of three external reviewers. The review process was double-blind so the reviewers did not know the identity of the authors of the submission. After a careful evaluation procedure in which all controversial and gray area papers were discussed individually we arrived at a total of 251 accepted papers for MICCAI 2010 of which 45 were selected for

podium presentation and 206 for poster presentation. The acceptance percentage 32% was in keeping with that of previous MICCAI conferences. All 251 papers are included in the three MICCAI 2010 LNCS volumes.
