# PHYSICAL & CHEMICAL CHANGE

In a physical change, the original substance still exists; it has only changed in form (i.e. size, shape, state of matter, etc). In addition, a physical change is always reversible - you can get back what you started with! In a chemical change, however, a completely new substance is produced - you can never get back what you started with! Energy (heat) changes typically accompany chemical changes, but can sometimes occur in physical changes as well. Do not assume a chemical change is taking place just because energy is involved! Think: Do I have a totally different substance than I started with? If so, this is always a chemical change.

Read the following statements. Classify the following as being a physical or chemical change.
