Tests in Print fills a pressing need for a comprehensive bibliography of all commercially available English language tests in print. Although these volumes are useful in and of themselves, their maximum usefulness requires the availability and use of the Mental Measurements Yearbooks. Although information on available tests and specific test bibliographies is valuable, the greatest service which Tests in Print can perform is to encourage test users to choose tests more wisely by consulting the MMY test reviews, test reviews from journals, and the professional literature on the construction, use, and validity of the tests being considered. Although information on available tests and specific test bibliographies is valuable, the greatest service which Tests in Print can perform is to encourage test users to choose tests more wisely by consulting the MMY test reviews, the excerpted test reviews from journals, and the professional literature on the construction, use, and validity of the tests being considered. Near-Field Antenna Measurements Vadim Serafimovich Kalashnikov, Maxim Yurievich Ponomarev, Oleg Yurievich Platonov, Victor Vasilievich Shubnikov, Mark Ilyich Rivkin, Artem Yurievich Shatrakov, Yury Grigorievich Shatrakov, Oleg Ivanovich Zavalishin, 2021-04-27. This book is useful both for those who want to get initial information on the measurement of the antenna parameters and for specialists directly involved in the experimental determination of the antenna parameters from the results of measuring the amplitude phase distribution in the near zone of the antennas. Currently, the near field method is the most common one for antenna measurements. In most books, an academic approach is given to the issue under consideration, and it is difficult to use them for the direct organization of measurements. In many others, specific narrow issues are considered that are accessible to understanding only by highly qualified engineers and readers. The purpose of this book is to get rid of the above disadvantages by offering the reader a more accessible exposition and formulas by which appropriate computer programs can be written with minimal effort. The contents of this book allow interested specialists to be not only users of the near field measuring facilities but also help in understanding the principles of their work. This book is intended for engineers and specialists whose activities are related to

experimental testing of radio characteristics of complex antenna systems especially near field measurements and is also useful as a textbook for senior students in the field of radioelectronics and radiophysics
