lab 6 work and energy washington state university - May 03 2023

web introduction the notion of work has a special meaning in physics when the applied force is constant in magnitude and direction and the motion is along a straight line the formula for work reduces to $W = Fd \cos \theta$ where F is the magnitude of the force, d is the magnitude of the displacement, and θ is the angle between the force and the displacement. If the force and displacement are in the same direction, $\theta = 0$ and $\cos \theta = 1$, so the formula simplifies to $W = Fd$.
