Objective To find reflection images of figures

If it's hard to visualize, try using grid paper to draw the shapes.

Getting Ready!

Look at the shapes at the right. Visualize flipping each shape across its yellow line. What word do the images of the shapes form? Copy the shapes as they are shown and sketch the results of flipping them.

In the Solve It, you reflected shapes across lines. Notice that when you reflect a figure, the shapes have *opposite orientations*. Two figures have opposite orientations if the corresponding vertices of the preimage and image read in opposite directions.

Lesson Vocabulary

- reflection
- line of reflection

The vertices of $\triangle BUG$ read clockwise.

The vertices of $\triangle B'U'G'$ read counterclockwise.

Essential Understanding When you reflect a figure across a line, each point of the figure maps to another point the same distance from the line but on the other side. The orientation of the figure reverses.

Take note

Key Concept Reflection Across a Line

A **reflection** across a line m , called the **line of reflection**, is a transformation with the following properties:

- If a point A is on line m , then the image of A is itself (that is, $A' = A$).
- If a point B is not on line m , then m is the perpendicular bisector of $\overline{BB'}$.

You write the reflection across m that takes P to P' as $R_m(P) = P'$.

The preimage B and its image B' are equidistant from the line of reflection.
