

# Standards for Mathematical Practice

## 1. Make **sense** of problems and persevere

### in solving them.

Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. "Does this make sense?"

## 2. **Reason** abstractly and quantitatively.

...to make sense of quantities and their relationships in problem situations: students can both decontextualize (abstract) and contextualize (specify).

## 3. Construct viable **arguments** and critique the reasoning of others.

...use stated assumptions, definitions, and previously established results in constructing arguments, making conjectures and building logical progressions of statements...

## 4. **Model** with mathematics.

...students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later...

## 5. Use appropriate **tools** strategically.

These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator... able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems.

## 6. Attend to **precision**.

...try to use clear definitions in discussion with others and in their own reasoning... careful about specifying units of measure... express numerical answers with a degree of precision appropriate for the problem context

## 7. Look for and make use of **structure**.

...students look closely to discern a pattern or structure... they may sort a collection of shapes according to how many sides the shapes have... can step back for an overview and shift perspective

## 8. Look for and express **regularity** in repeated reasoning.

...notice if calculations are repeated, and look both for general methods and for shortcuts... maintain oversight of the process, while attending to the details.
