today's industrial community as is automation Thus the title of this conference proceedings volume Flexible Automation  
reflects an added emphasis to the usual industrial automation As with general automation that has impacted every  
component of the manufacturing office and plant the identity of flexible automation can possess various forms and functions  
The papers in this volume have been grouped into two main categories One category deals with implementation of so called  
intelligent manufacturing This means use of algorithmic methods and artificial intelligence approaches to various problems  
encountered in practical factory automation tasks The placement of papers into five chapters of this part cannot be very  
precise due to multidisciplinary nature and constant rapid change of the field The categories are arranged starting from  
problems of enhancement of current factory settings and followed by the papers addressing more specific issues of  
production planning process technology and product engineering The fifth chapter contains papers on the very important  
aspects of factory automation problems of design simulation operation and monitoring of manufacturing cells      *Manual*
