**Johns and Cunningham's The Physics of**

**Radiology** Eva Bezak, Alun H Beddoe, Loredana G Marcu, Martin Ebert, Roger Price, 2021-03-01 The fifth edition of this respected book encompasses all the advances and changes that have been made since it was last revised. It not only presents new ideas and information, it shifts its emphases to accurately reflect the inevitably changing perspectives in the field engendered by progress in the understanding of radiological physics. The rapid development of computing technology in the three decades since the publication of the fourth edition has enabled the equally rapid expansion of radiology, radiation oncology, nuclear medicine, and radiobiology. The understanding of these clinical disciplines is dependent on an appreciation of the underlying physics. The basic radiation physics of relevance to clinical oncology, radiology, and nuclear medicine has undergone little change over the last 70 years, so much of the material in the introductory chapters retains the essential flavour of the fourth edition, updated as required. This book is written to help the practitioners in these fields understand the physical science as well as to serve as a basic tool for physics students who intend working as medical radiation physicists in these clinical fields. It is the authors' hope that students and practitioners alike will find the fifth edition of *The Physics of Radiology* lucid and straightforward.

**Medical Image Computing and Computer-Assisted Intervention – MICCAI 2017** Maxime Descoteaux, Lena Maier-Hein, Alfred Franz, Pierre Jannin, D. Louis Collins, Simon Duchesne, 2017-09-03 The three volume set LNCS 10433, 10434, and 10435 constitutes the refereed proceedings of the 20th International Conference on Medical Image Computing and Computer Assisted Intervention MICCAI 2017 held in Quebec City, Canada, in September 2017. The 255 revised full papers presented were carefully reviewed and selected from 800 submissions in a two-phase review process. The papers have been organized in the following topical sections: Part I: atlas and surface-based techniques, shape and patch-based techniques, registration techniques, functional imaging, connectivity, and brain parcellation; diffusion magnetic resonance imaging, dMRI, and tensor fiber processing, and image segmentation and modelling; Part II: optical imaging, airway and vessel analysis, motion and cardiac analysis, tumor processing, planning and simulation for medical interventions, interventional imaging and navigation, and medical image computing; Part III: feature extraction and classification techniques, and machine learning in medical image computing.

**Forward and Inverse Solvers in Multi-Modal Electric and Magnetic Brain Imaging: Theory, Implementation, and Application** Sampsa Puri, Jari-Pekka Parkkinen, Takfarinas Medani, Johannes Vorwerk, Richard Leahy, Maria-Carla Piastra, 2025-07-31 The computing resources of today, in combination with high-resolution individualized structural MRI scans, enable advanced forward modeling in a wide range of bioelectromagnetic applications targeting the brain. Forward solvers are used in combination with inverse methods to localize neuronal sources. These solvers have evolved from analytical approaches using a single or multi-layered spherical domain towards realistic modeling tools based, e.g., on the boundary and finite element methods (BEMs and FEMs). Modern FEM methods, using state-of-the-art high-resolution MRI numerical solvers and computing hardware, can handle high-resolution spatial discretization and advanced sensor models and incorporate tissue anisotropies. Similarly, inverse methods can also make use of individualized

MRI to support an inference of the brain activity e g through constraints on the placement of active neurons in the brain or on connectivity between neuronal populations inferred for diffusion MRI tractography Through reciprocity similar approaches are also applicable to the modeling of electromagnetic brain stimulation Integrating anatomical information and advanced forward and inverse approaches will be crucial in the development of the next generation of software tools for Spatiotemporal analysis of whole brain electrophysiology This research topic aims to discover new approaches to solve multi modal electric and magnetic brain imaging problems in source localization and stimulation as well as in complementary modalities such as impedance tomography In particular our goal is to advance the development of unified solver approaches that can utilize the vast amount of volumetric information that is available today through high resolution and high contrast MRI scans and benefit from the complementarity of the different modalities This issue will focus on novel methods that make use of high resolution MRI data in combination with novel approaches to modeling and inference applied to problems in source localization modeling of brain stimulation and impedance tomography These methods might make use of machine learning dynamic modeling filtering techniques or statistical inference The scope covers new forward and inverse methods and multi modal studies motivated by the following examples 1 Integrating powerful volumetric forward simulation techniques with inverse approaches currently includes many open questions These include for example the stability of a FEM based source model inside a complex structured head model with high contrasts inside or the inverse effects that follow from using a realistic geometry 2 Numerical implementations their performance and experimental applications are welcome for instance in building an advanced inverse approach e g a dynamic Bayesian solver or a Machine Learning scheme which requires a solid interplay between different forward and inverse solver components 3 Improving the level of multi modality in inverse modeling for instance optimized stimulation and source localization approaches or complementary modalities can be coupled in a straightforward manner if a volumetric forward simulation is applied The scope includes but is not limited to the following invasive non invasive multimodal neuroimaging techniques and their application Electroencephalography EEG Magnetoencephalography MEG Magnetic Resonance Imaging MRI Invasive EEG sEEG iEEG ECOG DBS CCEPs and low power stimulation Neurotherapeutic approaches Transcranial Magnetic Stimulation TMS Transcranial Electric Stimulation TES Temporal Interference Stimulation TIS Functional MRI diffusion tensor imaging DTI Combined EEG MEG fMRI Functional Near Infrared Spectroscopy fNIRS Utilizing cutting edge artificial intelligence Machine Learning Deep Learning
