Becker, Andreas Knez, Maximilian F Reiser, 2006-12-15 Preface to the Second Edition Despite worldwide efforts to assess and control cardiovascular risk factors cardiac diseases and in particular coronary artery disease CAD are still the foremost causes of death in the developed countries of Western Europe North America and Asia and are becoming increasingly common in Eastern Europe and the developing world Deanfield 2001 Approximately one in five deaths is currently related to cardiac disease in Europe and the US Nearly 500 000 deaths caused by CAD are reported every year in the US over 600 000 in Europe 170 000 of these in Germany alone Over 12 million US citizens have a history of CAD while every year 1.1 million US and 300 000 German citizens suffer a coronary attack and more than 40% will die as a result of these attacks Every second patient dies without prior symptoms and in most cases myocardial infarction occurs without warning Once a blockage of the coronary arteries has occurred death may ensue within a few minutes even before hospitalization is possible These alarming statistics highlight an acute need for tools to diagnose cardiac and coronary artery disease Presently the gold standard modality for diagnosis of CAD is invasive selective coronary angiography More than 2

Radiation Dose from Adult and Pediatric Multidetector Computed Tomography D. Tack, Pierre Alain Gevenois, 2007-12-31 Because of the radiation dose delivered multidetector row CT MDCT may induce cancers and the risk of death has been estimated at up to one per 1 000 examinations Despite this only a small proportion of referring clinicians radiologists and technologists are aware of both the radiation risks and their underlying mechanisms This book is designed to rectify this situation The first part of the book provides a comprehensive approach to all the factors that influence the radiation dose and subsequently the risk induced by using MDCT in children and adult patients In the second part guidelines are proposed for optimization of the radiation dose in order to obtain an image quality sufficient for appropriate diagnostic performance while restricting the dose delivered This book written by experts of international standing will appeal to both general and specialized radiologists including pediatric radiologists CT technologists physicists manufacturers and all professionals involved in MDCT

Coronary Radiology Matthijs Oudkerk, Maximilian F Reiser, 2010-04-21. During the past decade coronary radiology has undergone rapid development. This second edition of the only available monograph on the subject places special emphasis on the role of non invasive techniques which can supply information on the condition of the coronary arteries within one simple and short examination. The modalities considered in detail include CT angiography with multidetector and dual source tomography 2D and 3D visualization techniques and MR coronary angiography. Invasive procedures are not neglected however and a separate section includes chapters on conventional catheterization quantitative angiography and intravascular and quantitative ultrasound. In addition a section devoted to coronary calcification clearly explains its development and the use of modern techniques in its visualization and quantification. The informative text is supported by a large number of high quality color images of the coronary and cardiac anatomy.

Computer Vision and Mathematical Methods in Medical and Biomedical Image Analysis Milan Sonka, Ioannis A. Kakadiaris, Jan Kybic, 2004-10-04. Medical imaging and medical image analysis are rapidly developing. While medical imaging has already become a standard of modern medical care medical image analysis is still mostly performed visually and qualitatively. The ever increasing volume of acquired data makes it impossible to utilize them in full. Equally important the visual approaches to medical image analysis are known to suffer from a lack of reproducibility. A significant research effort is devoted to developing algorithms for processing the wealth of data available and extracting the relevant information in a computerized and quantitative fashion. Medical imaging and image analysis are interdisciplinary areas combining electrical computer and biomedical engineering computer science mathematics physics statistics biology medicine and other fields. Medical imaging and computer vision interestingly enough have developed and continue developing somewhat independently. Nevertheless bringing them together promises to be better both of these fields. We were enthusiastic when the organizers of the 2004 European Conference on Computer Vision ECCV allowed us to organize a satellite workshop devoted to medical image analysis.

Functional Imaging and Modeling of the Heart Alejandro F. Frangi, Petia I. Radeva, Andres Santos, Monica Hernandez, 2005-06-13. The 1st and 2nd International Conferences on Functional Imaging and Modelling of the Heart FIMH were held in Helsinki Finland in November 2001 and in Lyon France in June 2003. These meetings were born through a fruitful scientific collaboration between France and Finland that outreached to other groups and led to the start of this biennial event. The FIMH conference was the first attempt to agglutinate researchers from several complementary but often isolated fields: cardiac imaging signal and image processing applied mathematics and physics biomedical engineering and computer science cardiology radiology biology and physiology. In the first two editions the conference received an enthusiastic acceptance by experts of all these communities. FIMH was originally started as a European event and has increasingly attracted more and

more people from the US and Asia This edition of FIMH received the largest number of submissions so far with a result of 47 papers being accepted as either oral presentations or posters There were a number of submissions from non EU institutions which confirms the growing interest in this series of meetings All papers were reviewed by up to four reviewers The accepted contributions were organized into 8 oral sessions and 3 poster sessions complemented by a number of invited talks This year we tried to allocate as many papers as possible as oral presentations to facilitate more active participation and to stimulate multidisciplinary discussions
