**Reconsideration of Science and Technology III** Liu Dachun, Yang Huili, Fan Shanshan, 2022-09-30 Drawing on debates from traditional and postmodern thoughts on science and technology the title builds a new theoretical framework to reconsider science and technology integrating the opposing viewpoints that either justify science or negate it As the third volume of a three volume set that proposes to reconsider science and technology and explores how the philosophy of science and technology responds to an ever changing world this final volume seeks to restore the cultural implications of science Across the six chapters the authors probe the prospect of a pluralistic scientific culture including discussions of diversified value choices the tension between reason and unreason other binary characteristics of scientific knowledge including objectivity and uniqueness universality and locality as well as the loss awakening and reconstruction of scientific culture The authors call for a transformation of scientific culture from a dominant culture to an affirmative one and envision a free and open world of science and technology The volume will appeal to scholars and students interested in the philosophy of science and technology the ideology of scientism and anti scientism modernism and postmodernism Marxist philosophy and topics related to scientific culture

Bas van Fraassen's Approach to

Representation and Models in Science Wenceslao J. Gonzalez, 2014-02-19 This book analyzes Bas van Fraassen's characterization of representation and models in science. In this regard, it presents the philosophical coordinates of his approach and pays attention to his structural empiricism as a framework for his views on scientific representations and models. These are developed here through two new contributions made by van Fraassen. In addition, there are analyses of the relation between models and reality in his approach where the complexity of this conception is considered in detail. Furthermore, there is an examination of scientific explanation and epistemic values judgments. This volume includes a wealth of bibliographical information on his philosophy and relevant philosophical issues. Bas van Fraassen is a key figure in contemporary philosophy of science as the prestigious Hempel Award shows. His views on scientific representation offer new ideas on how it should be characterized and his conception of models shows a novelty that goes beyond other empiricists' approaches of recent times. Both aspects, the characterization of scientific representation and the conception of models in science, are part of a deliberate attempt to forge a structural empiricism, an alternative to structural realism based on an elaborated version of empiricism.

Techno-Scientific Practices Federica Russo, 2022-10-03 In scholarly debates as well as in everyday parlance, we tend to pull science and technology apart: science gives us theory and technology applies it. In practice, however, science and technologies are highly intertwined. In *Techno-Scientific Practices: An Informational Approach*, Federica Russo looks at the practice of science and elucidates the role of technologies and instruments in the process of knowledge production. In this exercise, it becomes evident that technologies cannot be analyzed on their own but always in relation to epistemic agents. Thus, *Techno-Scientific Practices* emphasizes the importance of analyzing the process of knowledge production in techno-scientific contexts in which there is a triad of relations to look at: us, the instruments, and the world. The book thus builds bridges between the philosophy of science, philosophy of technology, and science and technology studies in an unprecedented way.

**Science: Key Concepts in Philosophy** Steven French, 2007-08-09 The philosophical questions raised by the history and practice of science are among the most complex and stimulating. *Science: Key Concepts in Philosophy* is the ideal first stop for any student wishing to get to grips with this challenging subject. Written with the specific needs of students new to the discipline in mind, it covers the work of key thinkers and outlines clearly the central questions, problems, and arguments encountered in studying the philosophy of science. This is a practical and informative introduction to a major component of the undergraduate philosophy curriculum. *Key Concepts in Philosophy* is a series of concise, accessible, and engaging introductions to the core ideas and subjects encountered in the study of philosophy. Specially written to meet the needs of students and those with an interest in, but little prior knowledge of, philosophy, these books open up fascinating yet sometimes difficult ideas. The series builds to give a solid grounding in philosophy, and each book is also ideal as a companion to further study.

**Reconsideration of Science and Technology II** Liu Dachun, Ai Zhiqiang, Yang Huili, 2022-09-30 In reviewing and reconsidering the intellectual history of scientism and antiscientism, the authors assess the

process of reasoning and prejudices of these contrasting viewpoints while discussing the repercussions of scientific hegemony and its contemporary criticism As the second volume of a three volume set that proposes to reconsider science and technology and explores how the philosophy of science and technology responds to an ever changing world this title focuses on ideological trends centering around scientism and anti scientism since the 19th century The six chapters look into the emergence of scientism instrumental reason scientific optimism scientific pessimism scientific crisis and irrationalism and finally the deconstruction of scientism The authors provide insight into the connections and biases of these disparate views and critiques explore the influences of the hegemony of science and contemporary critique of science and evaluate the value of postmodernism and deconstructivism The volume will appeal to scholars and students interested in the philosophy of science and technology the ideology of scientism and anti scientism modernism and postmodernism Marxist philosophy and topics related to scientific culture

*The Routledge Handbook of Scientific Realism* Juha Saatsi, 2017-11-22 Scientific realism is a central long standing and hotly debated topic in philosophy of science Debates about scientific realism concern the very nature and extent of scientific knowledge and progress Scientific realists defend a positive epistemic attitude towards our best theories and models regarding how they represent the world that is unobservable to our naked senses Various realist theses are under sceptical fire from scientific antirealists e g empiricists and instrumentalists The different dimensions of the ensuing debate centrally connect to numerous other topics in philosophy of science and beyond The Routledge Handbook of Scientific Realism is an outstanding reference source the first collection of its kind to the key issues positions and arguments in this important topic Its thirty four chapters written by a team of international experts are divided into five parts Historical development of the realist stance Classic debate core issues and positions Perspectives on contemporary debates The realism debate in disciplinary context Broader reflections In these sections the core issues and debates presented analysed and set into broader historical and disciplinary contexts The central issues covered include motivations and arguments for realism challenges to realism from underdetermination and history of science different variants of realism the connection of realism to relativism and perspectivism and the relationship between realism metaphysics and epistemology The Routledge Handbook of Scientific Realism is essential reading for students and researchers in philosophy of science It will also be very useful for anyone interested in the nature and extent of scientific knowledge
