STUDY GUIDE

Preparation: Verify the patient's identity using two identifiers. Explain the procedure to the patient to obtain consent and ensure they're comfortable. Assemble all necessary equipment: gloves, alcohol swabs, tourniquet, appropriate needles, collection tubes, and band-aids. **Step 1:** Select site. Apply the tourniquet about 3-4 inches above the selected puncture site. Assess the patient's arm for a suitable vein; the median cubital vein is often the first choice due to its size and stability. Look for veins that are visible, palpable, and have a bouncy feel when pressed.

ORDER OF DRAW

Order of Draw: Follow the correct order of draw to prevent cross-contamination of additives between tubes: Blood cultures, coagulation tube (light blue), serum tubes with or without clot activator (red or gold), heparin tubes (green), EDTA tubes (purple), and glycolytic inhibitor tubes (gray).

Procedure: Clean the puncture site with an alcohol swab in a circular motion, starting at the center and moving outward. Perform the venipuncture at a 15-30 degree angle with the barrel of the needle facing upward. Once blood flow is established, fill and change tubes as needed, maintaining the order of draw. Release the tourniquet before removing the needle. Apply pressure to the site after removing the needle to stop bleeding. Post-procedure: Properly label all tubes with the patient's information and the date/time of collection. Dispose of sharps immediately in a sharps container.

Thank the patient and provide any necessary aftercare instructions. **Safety and Compliance:** Always wear gloves and practice standard precautions to prevent exposure to bloodborne pathogens. Ensure proper disposal of all used materials according to guidelines. This cheat sheet highlights critical steps and considerations in phlebotomy, serving as a quick review to promote safe and effective practice. Always adhere to the specific protocols of your institution or laboratory.

NETosis 2: The Excitement Continues Mariana J. Kaplan, Marko Radic, Martin Herrmann, 2017-12-28 NETosis a form of cell death that manifests by the release of decondensed chromatin to the extracellular space provides valuable insights into mechanisms and consequences of cellular demise Because extracellular chromatin can immobilize microbes the extended nucleohistone network was called a neutrophil extracellular trap NET and the process of chromatin release was proposed to serve an innate immune defense function Extracellular chromatin NETs were initially observed in studies of neutrophils and are most prominent in these types of granulocytes Subsequent studies showed that other granulocytes and in a limited way other cells of the innate immune response may also release nuclear chromatin following certain kinds of stimulation Variations of NETosis were noted with cells that remain temporarily motile after the release of chromatin Numerous stimuli for NETosis were discovered including bacterial breakdown products inflammatory stimuli particulate matter certain crystals immune complexes and activated thrombocytes Fundamental explorations into the mechanisms of NETosis observed that neutrophil enzyme activity PAD4 neutrophil elastase proteinase 3 and myeloperoxidase and signal transduction pathways contribute to the regulation of NETosis Histones in NET chromatin become modified by peptidylarginine deiminase 4 PAD4 and cleaved at specific sites by proteases leading to extensive chromatin externalization In addition NETs serve for attachment of bactericidal enzymes including myeloperoxidase leukocyte proteases and the cathelicidin LL 37 NETs are decorated with proteases and may thus contribute to tissue destruction However the attachment of these enzymes to NET associated supramolecular structures restricts systemic spread of the proteolytic activity While the benefit of NETs in an infection appears obvious NETs also participate as key protagonists in various pathologic states Therefore it is essential for NETs to be efficiently cleared otherwise digestive enzymes may gain access to tissues where inflammation takes place Persistent NET exposure at sites of inflammation may lead to a further complication NET antigens may provoke acquired immune responses and over time could initiate autoimmune reactions serve as antigen for nuclear autoantibodies and foster DNA immune complex related inflammation Neutrophil products and deiminated proteins comprise an important group of autoantigens in musculoskeletal disorders Aberrant NET synthesis and or clearance are often associated with inflammatory and autoimmune conditions Recent evidence also implicates aberrant NET formation in the development of endothelial damage atherosclerosis and thrombosis Intravital microscopy provides evidence for conditions that induce NETosis in vivo Furthermore NETs can easily

be detected in synovial fluid and tissue sections of patients with arthritis and gout NETosis is thus of interest to researchers who investigate innate immune responses host pathogen interactions chronic inflammatory disorders cell and vascular biology biochemistry and autoimmunity As we enter the second decade of research on NETosis it is useful and timely to review the mechanisms and pathways of NET formation their role in bacterial and fungal defense and their importance as inducers of autoimmune responses

Point-of-care testing Peter Lippa, Ralf Junker, 2018-07-18 The underlying technology and the range of test parameters available are evolving rapidly The primary advantage of POCT is the convenience of performing the test close to the patient and the speed at which test results can be obtained compared to sending a sample to a laboratory and waiting for results to be returned Thus a series of clinical applications are possible that can shorten the time for clinical decision making about additional testing or therapy as delays are no longer caused by preparation of clinical samples transport and central laboratory analysis Tests in a POC format can now be found for many medical disciplines including endocrinology diabetes cardiology nephrology critical care fertility hematology coagulation infectious disease and microbiology and general health screening Point of care testing POCT enables health care personnel to perform clinical laboratory testing near the patient The idea of conventional and POCT laboratory services presiding within a hospital seems contradictory yet they are in fact complementary together POCT and central laboratory are important for the optimal functioning of diagnostic processes They complement each other provided that a dedicated POCT coordination integrates the quality assurance of POCT into the overall quality management system of the central laboratory The motivation of the third edition of the POCT book from Lippa Junker which is now also available in English is to explore and describe clinically relevant analytical techniques organizational concepts for application and future perspectives of POCT From descriptions of the opportunities that POCT can provide to the limitations that clinicians must be cautioned about this book provides an overview of the many aspects that challenge those who choose to implement POCT Technologies clinical applications networking issues and quality regulations are described as well as a survey of future technologies that are on the future horizon The editors have spent considerable efforts to update the book in general and to highlight the latest developments e.g. novel POCT applications of nucleic acid testing for the rapid identification of infectious

agents Of particular note is also that a cross country comparison of POCT quality rules is being described by a team of international experts in this field

Programa de prácticas de simulación II Pilar Fernández Narváez, 2019 Las prácticas de simulación constituyen una estrategia didáctica imprescindible en la formación de los futuros profesionales de enfermería. La práctica simulada de procedimientos y técnicas permite a los estudiantes experimentar con el error y adquirir seguridad en la ejecución y manejo de situaciones clínicas. Es necesario que esta práctica sea estructurada y significativa y que esté sustentada por unos materiales didácticos adecuados para que el estudiante pueda preparar previamente de forma autónoma los contenidos que fundamentan la práctica. Este manual dirigido a los estudiantes que realizan las prácticas de simulación de 2º curso se apoya en los contenidos de ediciones anteriores e incorpora las últimas evidencias científicas relativas a los diferentes procedimientos. Además se fundamenta en la amplia experiencia clínica de los autores y también en la mirada de los estudiantes que han hecho aportaciones muy valiosas desde su perspectiva de usuarios del material.
