Photographie Aérienne Oar Cerfvolant:

La Photographie Aérienne Par Cerf-volant Arthur Batut, 2017-05-23 Au printemps de 1888 lisant pour la première fois le beau travail de M Gaston Tissandier sur la Photographie en ballon¹ nous fûmes surpris que l'idée de substituer un cerf volant au ballon ne fût encore venue à personne. En effet si dans la Photographie aérienne est susceptible d'applications nombreuses d'une utilité incontestable il faut bien le reconnaître le support de l'appareil photographique le ballon est un objet encombrant coûteux nécessitant un matériel considérable au point de vue du transport et surtout du gonflement et demande en outre un personnel nombreux pour la manœuvre. La perfection des preuves obtenues en ballon est aujourd'hui chose à montrer on entrevoit déjà la longue liste des applications qu'on en peut faire. Mais pour qu'une découverte soit vraiment utile pour qu'elle porte tous ses fruits il faut qu'elle puisse être mise entre les mains de tous. Or la Photographie en ballon est le lot d'un très petit nombre des rares privilégiés de la fortune que tentent les recherches scientifiques. Songeons ce qu'était la Photographie ordinaire il y a quinze ans l'apanage de quelques adeptes ce qu'elle est aujourd'hui le partage de tous le crayon photographique pour ainsi dire que le voyageur le touriste le simple promeneur emportent avec eux. Quel magicien a pu dans si peu de temps opérer une transformation pareille. Le gélatinobromure d'argent qui en rendant les manipulations presque nulles a simplifié et surtout allégé d'une manière invraisemblable le bagage photographique.

L'oeil du cerf-volant Eric Tielkes, 2003 Partout dans le monde le cerf volant est un loisir mais il est moins connu comme outil. Pourtant il sert aussi la prise de vues aériennes en basse altitude dans un but professionnel ou artistique. Les cerfs volants utilisés à cette fin sont équipés d'un appareil photographique qui fournit des photographies de précision en vue d'avion. C'est l'œil du cerf volant. Ce mode de photographie aérienne est utilisé pour des prises de vues sur des sites spécifiques qui peuvent être des ouvrages tels que puits, barrages, marchés ou des sites comme celui d'un village ou celui d'un chantier de fouille archéologique. Il est aussi utilisé dans les suivis ruraux par exemple celui de parcelles agricoles dans le cadre d'essais agronomiques ou celui de champs paysans ou de sites d'intervention de projet d'aménagement dont on cherche à suivre l'évolution au cours des saisons ou d'une année sur l'autre. La gamme de ces utilisations est largement illustrée dans l'ouvrage basé sur l'expérience personnelle de l'auteur au Niger. Ce manuel fournit toutes les informations techniques et pratiques relatives au cerf volant et à l'équipement de prise de vue. Les critères de choix du cerf volant de l'appareil photographique du dispositif de fixation et du système de déclenchement de l'appareil sont détaillés. Un ordre de grandeur des coûts et une liste d'adresses sélectionnées pour l'achat du matériel complètent l'information technique. Le manuel donne aussi des conseils précis pour la mise en œuvre d'une campagne de prise de vue monté à l'échelle au sol repérages. Enfin le manuel est complété par quelques exemples d'interprétation des photographies aériennes à l'aide de logiciels de traitement d'image.
