

Photosynthesis & Respiration

- _____ - A process by which plants convert sunlight, water, and carbon dioxide into food energy (sugar), oxygen and water.
- _____ - An elongated cell organelle containing chlorophyll where photosynthesis takes place.
- _____ - A green molecule which uses light energy from sunlight to change water and carbon dioxide gas into sugar and oxygen
- Photosynthesis Equation

- The _____ absorbs the _____. Chlorophyll then uses sunlight to change water, carbon dioxide and, nutrients from the soil. The chlorophyll processes the ingredients to make _____ (plant food) and _____.

But, what about animals?

- Animals make the _____ that plants need, and plants make the _____ that animals need.
- _____ - The process by which the chemical energy of "food" molecules is released and changed into ATP.
- _____ - Rod-shaped organelles with a double membrane which converts the energy stored in glucose into ATP for the cell.

Malcolm Campbell, Christopher J. Paradise, 2016-04-21 Perhaps the most important chemical reactions on the planet take place inside a plant's chloroplasts. In this tiny green organelle, plants have the capacity to capture the energy in light and use that energy to convert CO₂ gas into building blocks used to produce all four categories of biological molecules: lipids, carbohydrates, proteins, and nucleic acids. Animals could not survive if plants did not exist. Not only do they provide us with oxygen to breathe; they also generate the starting materials for everything we eat. Rather than focusing on names and trivial details, this book shows how plants harvest energy in a way that self-regulates. Plants shift how they process light energy to maximize their productivity and minimize their exposure to dehydration. All of this regulation is carried out inside every plant on earth. In addition to plants, there are microbial primary producers that can harvest energy from a range of environmental sources so that no place on earth is devoid of life. *Photosynthesis and Respiration* William G. Hopkins, 2006 Follows the flow of sun energy in plants from photosynthesis through respiration. Source: other than the Library of Congress **Understanding Photosynthesis and Plant Cellular Respiration as "nested Systems"** Mary H. Brown, 2005 This dissertation project

focused on pre service elementary teachers conceptions of the plant processes of photosynthesis and cellular respiration as being connected occurring at multiple ecological levels and working within nested systems Participants enrolled in a biology course designed for elementary education majors provided their views of the processes through a series of tasks with a peer a semi structured interview and clarified both photosynthesis and plant cellular respiration directly following classroom instruction on the two topics The instructor of the course was interviewed after a preliminary analysis of the participants responses Data were analyzed using the qualitative analysis computer program The Ethnograph v 5 with attention to whether the participants viewed the energy reactions as interconnected within multiple ecological levels of the plant system and as nested systems of the global ecosystem Participants did view photosynthesis as an energy process but were less committed to cellular respiration as an energy process While most participants described the processes within multiple ecological levels of the plant system their accuracy of the concepts within the levels varied Responses suggested a level of understanding that included few of the ecological levels with descriptions focused primarily on the organism level Instruction included all multiple ecological levels with focus on the biochemical level Many participants simplified the two processes in a manner that matched the evaluation of their instruction Few participants held a nested systems view of the global ecosystem Justifications provided for their explanations were authoritarian and anthropomorphic with teleological and tautological reasons also expressed The pre service teachers did compare plant functions with analogous human functions potentially suggesting an intuitive conception In general the pre service teachers viewed plants as dependent on humans and having use within human society This project may have implications for the instruction of photosynthesis and cellular respiration Analogy of plant processes with humans use of energy and the utility of plants for human society may be a motivating factor for instruction Instruction that focuses on the organism level first and provides explicit signposts when moving from one ecological level to another may provide clearer understanding of the processes

When people should go to the books stores, search establishment by shop, shelf by shelf, it is really problematic. This is why we provide the books compilations in this website.
