Student Work and Teacher Practices in Science Christine Y. O'Sullivan, Andrew R. Weiss, 1999 In 1996 the National Assessment of Educational Progress NAEP assessed the knowledge and skills of students in the areas of earth science life science and physical science It also collected information related to the background of students grades 4 8 and 12 their teachers grades 4 and 8 and the schools they attended grades 4 8 and 12 This report is intended primarily for science teachers hence the results presented relate directly to student performance classroom practices and school climate This report also discusses students attitudes and beliefs about science The report is divided into four parts In the first part chapter 1 an overview of the assessment is provided This includes information about the framework used in the development of the assessment a description of how the assessment was administered to students and an explanation of how to interpret NAEP results In the second part chapters 2 3 and 4 examples of questions and student responses are presented These chapters are divided by grade The third part chapters 5 and 6 contains information collected from students teachers and school administrators about classroom practices student motivation and parental involvement in learning Finally the fourth part contains appendices offering a fuller description of the procedures used for the NAEP 1996 science assessment appendix A scoring guides for questions discussed in chapters 2 3 and 4 appendix B and standard errors

Motivating Persistence in the Face of Failure Catherine Chi Chase,2011 Failure often presents a valuable learning opportunity however students may need motivational scaffolds to protect them from the negative psychological ramifications of failure This work explored the effectiveness of a motivation based intervention called an ego protective buffer EPB that was designed to enhance persistence after failure An ego protective buffer EPB maintains a stable sense of competence by lessening the impact of failure on one s psyche The specific instantiation of an EPB tested here was designed to elicit a combination of internal and external attributions for failure External attributions protect one s sense of competence by averting the blame for failure away from the self while internal attributions encourage students to take some responsibility for remedying the failure situation Based on this theory we embedded an EPB into the rule structure of a computer based genetics game and unleashed it on 143 seventh graders In the EPB condition students were told that winning in the game was a probabilistic outcome dependent on a combination of chance and skill on the part of the students In the Control condition students were told that winning in the game was a deterministic outcome dependent on students skill only Students played the game during two class periods Measures include pre and posttests motivational survey measures and in game behaviors The EPB did have an effect on learning but only amongst high failing students High failing EPB students learned just as much as their low failing counterparts This was not so in the Control condition where high failing students learned far less than their low failing counterparts So the high failing EPB group was behaving as if they were buffered from the effects of failure We also found evidence of a possible mechanism behind this learning effect In the high failing EPB condition students were equally likely to persist after success and failure while in the Control condition students were far more likely to persist after success exhibiting risk averse behaviors This difference was more exaggerated in a within subjects comparison contrasting the same individuals in situations of high and low failure Finally persistence after failure was associated with learning across the full sample of subjects Regardless of condition or failure rate students who persisted more after failure also learned more This study together with the author s related body of work provides compelling evidence that an EPB is a viable intervention for encouraging persistence in the face of failure **Students Learning Science** Christine Y.
