APPENDIX A: WRITING A BETTER SCIENTIFIC ARTICLE

Karie Friedman

Assistant Editor, Reviews of Modern Physics

Using examples drawn from the pages of *RMP*, the author presents specific writing techniques that can enhance the sense of immediacy between writer and reader and improve the clarity, economy, and polish of scientific writing. The first half of the article is devoted to elements of good style applicable by anyone, while the second half treats problems often encountered by non-native writers of English.

What sets a first-rate scientific article apart from the thousands of forgettable publications that appear in the literature every year? For a very few, content alone ensures that the paper will be widely cited. But for most, it is the way the article is written. A good article puts us in touch with a good mind (or team of good minds) at work, whose quality is revealed by clarity, economy, order, and perhaps wit. These rather abstract qualities are warmed by the author's effort to share his or her interest in the subject as if speaking with a colleague, presenting the work not as a series of cut and dried results, but as an ongoing process by which understanding is sought. The reader whose interest is thus engaged can then share the author's satisfaction as a solution begins to emerge.

A number of specific writing techniques can enhance the sense of immediacy between you and your reader. In addition, avoidance of some common pitfalls will reduce dullness, wordiness, and pomposity, which – contrary to popular belief – are not desirable attributes in a scientific article, but represent negative values of the clarity, economy, and wit mentioned above. In this guide, I describe practical measures that you, the author, can take to give your writing greater impact, with examples drawn from the work of *RMP*'s contributors. The guide is divided into two sections, one of more general application, for anyone interested in writing better, and the other aimed specifically at the author whose first language is not English.

A. Elements of good style for everyone

1. Active and passive voices

You have heard this before, but it bears repeating: **active sentences are more vigorous than passive ones**. When you want to put more muscle into your prose style, replace "Science is done by people" with "People do science."

Writers of scientific papers often favor the passive because it relieves them of naming themselves as the ones who conducted an experiment or proposed a theory. Saying that "it was thought that the magnetoresis-

tance could provide an answer" shields the person who thought so from the critical gaze of his audience and is vague enough to spread credit or blame, implying that the writer was not alone in having this idea. The passive voice also provides a way out for those who feel reticent about naming names and pointing fingers when discussing others' work. Keeping names to a minimum, such a writer introduces, say, the work of Erikson *et al.*, and then follows with a three-page description in which "the bubble formation was simulated," "a constant of $\alpha = 1.5$ was assumed," and "agreement with the model of McCray was found to within 3%." There are three problems with this approach. First, it sounds stuffy. Second, it may lead to confusion, especially if other people's models and parameters were adopted by Erikson *et al.* and need to be discussed as well. After a while the reader will no longer be sure whose work is being described. And third, any effort to dissociate science from its practitioners by describing it passively is doomed to failure, since readers not only know that scientists do science, they are very interested in which scientists – it could well be one of their friends or competitors. **Changing to the active voice and stating who did what – "we simulated the bubble formation," "McCray assumed a constant of $\alpha = 1.5$," "they found" – will tell readers what they want to know and set the work in the context of human endeavor.**

The active voice also encourages economy. Compare the following pairs of sentences:

A review of the main problems in this field was given by Luo *et al.*

Luo *et al.* reviewed the main problems in this field.

A discussion of intrinsic pinning is offered in Sec. VIII.

In Sec. VIII we discuss intrinsic pinning.

In each pair above, the active version uses fewer words. **Most readers will perceive this brevity as the mark of a direct and vigorous mind.**

There are, of course, occasions when the passive voice is useful. Sometimes you will want to put emphasis on the thing being acted upon, by naming it at the beginning of a sentence.
