

Transpiration

← = MOVEMENT OF WATER

Water Potential - Osmotic Potential

Transpiration Pull

- Transpiration pull is the force that causes water to move up the xylem vessels.
 - 1. The water potential in the leaves is lower than in the roots. This causes water to move from the roots to the leaves.
 - 2. This causes a negative pressure to be created in the xylem vessels.
- Water potential is determined by the concentration of water molecules.

Water Potential

- Water moves through the xylem vessels in a continuous column. This is called the cohesion-tension theory.
- Transpiration creates a negative pressure in the xylem. This causes water to move from the roots to the leaves.
- The water molecules are held together by hydrogen bonds. This creates a continuous column of water in the xylem vessels. This is called cohesion.
- At the same time, transpiration from the leaves creates a tension. This causes water to move up the xylem vessels.
