Atkinson, William F. Langford, Angelo Bernardo Mingarelli, Natural Sciences and Engineering Research Council Canada, 1987

The year 1986 marked the sesquicentennial of the publication in 1836 of J Sturm's classic memoir on boundary value problems for second order equations. In July 1986 the Canadian Mathematical Society sponsored the International Conference on Oscillation Bifurcation and Chaos held at the University of Toronto. This volume contains the proceedings of this conference. Requiring a basic knowledge of the qualitative theory of differential equations, this book is aimed at mathematicians and students working in any area of differential equations as well as researchers interested in applying recent results in oscillation and bifurcation theory to other disciplines. Readers will gain a broad perspective on current research in this area from both the Sturmian and dynamical systems points of view as well as an understanding of new results useful for application and of directions for future research.

Nonlinear Semigroups, Partial Differential Equations and Attractors

T.L. Gill, Woodford W. Zachary, 2006-11-15. The original idea of the organizers of the Washington Symposium was to span a fairly narrow range of topics on some recent techniques developed for the investigation of nonlinear partial differential equations and discuss these in a forum of experts. It soon became clear, however, that the dynamical systems approach interfaced significantly with many important branches of applied mathematics. As a consequence, the scope of this resulting proceedings volume is an enlarged one with coverage of a wider range of research topics.

Discrete Systems and Integrability

J. Hietarinta, N. Joshi, F. W. Nijhoff, 2016-09. A first introduction to the theory of discrete integrable systems at a level suitable for students and non-experts.

Dynamical Systems

Lamberto Cesari, Jack K. Hale, Joseph P. LaSalle, 2014-05-10. Dynamical Systems: An International Symposium. Volume 1 contains the proceedings of the International Symposium on Dynamical Systems held at Brown University in Providence, Rhode Island, on August 12-16, 1974. The symposium provided a forum for reviewing the theory of dynamical systems in relation to ordinary and functional differential equations as well as the influence of this approach and the techniques of ordinary differential equations on research concerning certain types of partial differential equations and evolutionary equations in general. Comprised of 29 chapters, this

volume begins with an introduction to some aspects of the qualitative theory of differential equations followed by a discussion on the Lefschetz fixed point formula. Nonlinear oscillations in the frame of alternative methods are then examined along with topology and nonlinear boundary value problems. Subsequent chapters focus on bifurcation theory, evolution governed by accretive operators, topological dynamics and its relation to integral equations and non autonomous systems and non controllability of linear time invariant systems using multiple one dimensional linear delay feedbacks. The book concludes with a description of sufficient conditions for a relaxed optimal control problem. This monograph will be of interest to students and practitioners in the field of applied mathematics.

Advances in Dynamic Equations on Time Scales Martin Bohner, Allan C. Peterson, 2011-06-28. The development of time scales is still in its infancy yet as inroads are made interest is gathering steam. Of a great deal of interest are methods being introduced for dynamic equations on time scales which now explain some discrepancies that have been encountered when results for differential equations and their discrete counterparts have been independently considered. The explanations of these seeming discrepancies are incidentally producing unifying results via time scales methods. The study of dynamic equations on time scales is a fairly new subject and research in this area is rapidly growing. It has been created in order to unify continuous and discrete analysis and it allows a simultaneous treatment of differential and difference equations extending those theories to so called dynamic equations. An introduction to this subject is given in *Dynamic Equations on Time Scales: An Introduction with Applications* MARTIN BOHNER and ALLAN PETERSON Birkhauser 2001 86. The current book is designed to supplement this introduction and to offer access to the vast literature that has already emerged in this field. It consists of ten chapters written by an international team of 21 experts in their areas thus providing an overview of the recent advances in the theory on time scales. We want to emphasize here that this book is not just a collection of papers by different authors.

Dynamical Systems, Control, Coding, Computer Vision Giorgio Picci, D.S. Gilliam, 2012-12-06. This book is a collection of essays devoted in part to new research directions in systems, networks and control theory and in part to the growing interaction of these disciplines with new sectors of engineering and applied sciences like coding, computer vision and hybrid systems. These are new areas of rapid growth and of increasing importance in modern technology. The essays written by world leading experts in the field reproduce and expand the plenary and minicourse/joint symposia invited lectures which were delivered at the Mathematical Theory of Networks and Systems Symposium MTNS 98 held in Padova Italy on July 6-10 1998. Systems control and networks theory has permeated the development of much of present day technology. The impact has been visible in the past fifty years through the dramatic expansion and achievements of the aerospace and avionics industry through process control and factory automation, robotics, communication signals analysis and synthesis and more recently even finance to name just the most visible applications. The theory has developed from the early phase of its history when the basic tools were elementary complex analysis, Laplace transform and linear differential equations to present day where the mathematics ranges widely

from functional analysis PDE s abstract algebra stochastic processes and differential geometry Irrespective of the particular tools however the ba sic unifying paradigms of feedback stability optimal control and recursive filtering have remained the bulk of the field and continue to be the basic motivation for the theory coming from the real world **Rational Matrix Equations in Stochastic Control** Tobias Damm,2004-01-23 This book is the first comprehensive treatment of rational matrix equations in stochastic systems including various aspects of the field previously unpublished results and explicit examples Topics include modelling with stochastic differential equations stochastic stability reformulation of stochastic control problems analysis of the rational matrix equation and numerical solutions Primarily a survey in character this monograph is intended for researchers graduate students and engineers in control theory and applied linear algebra The Rational Spirit in Modern Continuum Mechanics Chi-Sing Man,Roger L. Fosdick,2006-01-19 Through his voluminous and influential writings editorial activities organizational leadership intellectual acumen and strong sense of history Clifford Truesdell III 1919 2000 was the main architect for the renaissance of rational continuum mechanics since the middle of the twentieth century The present collection of 42 essays and research papers pays tribute to this man of mathematics science and natural philosophy as well as to his legacy The first five essays by B D Coleman E Giusti W Noll J Serrin and D Speiser were texts of addresses given by their authors at the Meeting in memory of Clifford Truesdell which was held in Pisa in November 2000 In these essays the reader will find personal reminiscences of Clifford Truesdell the man and of some of his activities as scientist author editor historian of exact sciences and principal founding member of the Society for Natural Philosophy The bulk of the collection comprises 37 research papers which bear witness to the Truesdellian legacy These papers cover a wide range of topics what ties them together is the rational spirit Clifford Truesdell in his address upon receipt of a Birkhoff Prize in 1978 put the essence of modern continuum mechanics succinctly as conceptual analysis analysis not in the sense of the technical term but in the root meaning logical criticism dissection and creative scrutiny Nonlinear Equations in Abstract Spaces V. Lakshmikantham,2014-05-27 Many problems in partial differential equations which arise from physical models can be considered as ordinary differential equations in appropriate infinite dimensional spaces for which elegant theories and powerful techniques have recently been developed This book gives a detailed account of the current state of the theory of nonlinear differential equations in a Banach space and discusses existence theory for differential equations with continuous and discontinuous right hand sides Of special importance is the first systematic presentation of the very important and complex theory of multivalued discontinuous differential equations
