Great White Sharks

One of the most feared animals in the world is the shark and the shark most people are afraid of is the great white shark. It gets its name from its white belly. The top of the great white is gray which helps it blend in with the rocky bottom of the ocean. Although some fish are bigger, like the whale shark, the great white can grow up to 20 feet long. Unlike the calm, slow whale shark that feeds on tiny fish and plants, the great white is speedy and aggressive. A great white's prey includes sea lions, seals, sea turtles and rays. They use their razor sharp teeth, not to chew, but to rip their prey into small pieces. They have hundreds of teeth that can grow up to three inches long. The great white does not have many predators in the ocean except for orcas and larger sharks. Humans, however, are its biggest threat. Sharks often get caught in fishing nets or humans kill them for their fins or teeth.

web matlab is a well known classical matrix computing environment which makes it well suited for simulating quantum algorithms the qcf library extends matlab by adding functions to represent and visualize common quantum operations

finite quantum well width issue matlab answers mathworks - May 06 2022

web mar 13 2019 i have a code to solve schrödinger equation for finite square well however when i change width of the well between 100 200 or anything like 150 250 350 etc the solution for equation is not symetric however schrödinger equation should have been symetrical sinus function how can i fix this here is my code

schrodinger s equation in the 1 dimensional potential well - Aug 21 2023

web may 13 2020 if we want to know the wave function how to distribute in the quantum well then we can calculate the schrodinger equation to get the eigen energy in the potential well here we only consider the 1 dimensional bound potential as our examples

teaching quantum mechanics with matlab - Sep 10 2022

web teaching quantum mechanics with matlab abstract among the ideas to be conveyed to students in an introductory quantum mechanics course we have the pivotal idea championed by dirac that functions correspond to column vectors kets and that differential operators correspond to matrices ket bras acting on those vectors
