There are topics on natural products and fermentation process chemicals, organic chemicals, inorganic chemicals, refinery operations, oil and gas operations, and nanotechnology products. In some of these topics, computer simulation and costing examples are included. An illustration of modelling and simulation using C is also given as an example of user-written programs for simulation. Another method that can be used for simulation is the use of spreadsheets, which is also described with the help of an example. A new important topic of today, being polysilicon used in the manufacture of computer chips and solar panels, is also covered in detail.

Comprehensive Energy Systems Ibrahim Dincer, 2018-02-07. Comprehensive Energy Systems Seven Volume Set provides a unified source of information covering the entire spectrum of energy, one of the most significant issues humanity has to face. This comprehensive book describes traditional and novel energy systems from single generation to multi-generation, also covering theory and applications. In addition, it also presents high-level coverage on energy policies, strategies, environmental impacts, and sustainable development. No other published work covers such breadth of topics in similar depth. High-level sections include Energy Fundamentals, Energy Materials, Energy Production, Energy Conversion, and Energy Management. Offers the most comprehensive resource available on the topic of energy systems. Presents an authoritative resource authored and edited by leading experts in the field. Consolidates information currently scattered in publications from different research fields: engineering as well as physics, chemistry, environmental sciences, and economics, thus ensuring a common standard and language.

Catalytic Ammonia Synthesis J.R. Jennings, 2013-06-29. The phenomenon of catalysis is found in many homogeneous and heterogeneous systems undergoing chemical change, where it effects the rates of approach to the equilibrium state in processes as diverse as those found in the stars, the earth's mantle, living organisms, and the various chemistries utilized by industry. The economies and the living standards of both developed and developing countries depend to varying degrees upon the efficacy of their chemical industries. Consequently, this century has seen a wide exploration and expansion of catalytic chemistry, together with an intensive investigation of specific essential processes like those contributing to life-supporting agricultures. Prime among the latter must surely be the fixation of atmospheric nitrogen by catalytic hydrogenation to anhydrous ammonia, still the preferred synthetic precursor of the nitrogenous components of fertilizers. In each decade, contemporary concepts and techniques have been used to further the understanding, as yet incomplete, of the catalyst, the adsorbates, the surface reactions, and the technology of large-scale operation. The contributors to the present volume review the state of the art, the science, and the technology; they reveal existing lacunae and suggest ways forward. Around the turn of the century, Sabatier's school was extending the descriptive catalytic chemistry of hydrogenation by metals to include almost all types of multiple bond. The triple bond of dinitrogen, which continued to be more resistant than the somewhat similar bonds in carbon monoxide and ethyne, defied their efforts.

Petroleum Biodegradation and Oil Spill Bioremediation Karuna K. Arjoon, James G. Speight, 2022-12-22

The prime focus of the book is to determine the mechanism, extent and efficiency of biodegradation processes as it is necessary to know the composition of the original crude oil or crude oil product. The technology of bioremediation and the concerns of whether or not bioremediation technologies can accelerate this natural process enough to be considered practical and if so whether they might find a niche as replacements for or adjuncts to other crude oil spill response technologies. This book also introduces the reader to the science of the composition of crude oil and crude oil products, which is at the core of understanding the chemistry of biodegradation and bioremediation processes.
