Model-Reference Robust Tuning of PID Controllers Victor M. Alfaro, Ramon Vilanova, 2016-04-16 This book presents a unified methodology for the design of PID controllers that encompasses the wide range of different dynamics to be found in industrial processes This is extended to provide a coherent way of dealing with the tuning of PID controllers The particular method at the core of the book is the so called model reference robust tuning MoReRT developed by the authors MoReRT constitutes a novel and powerful way of thinking of a robust design and taking into account the usual design trade offs encountered in any control design problem The book starts by presenting the different two degree of freedom PID control algorithm variations and their conversion relations as well as the indexes used for performance robustness and fragility evaluation the bases of the proposed model Secondly the MoReRT design methodology and normalized controlled process models and controllers used in the design are described in order to facilitate the formulation of the different design problems and subsequent derivation of tuning rules In later chapters the

application of MoReRT to over damped inverse response integrating and unstable processes is described The book ends by presenting three possible extensions of the MoReRT methodology thereby opening the door to new research developments In this way the book serves as a reference and source book for academic researchers who may also consider it as a stimulus for new ideas as well as for industrial practitioners and manufacturers of control systems who will find appropriate advanced solutions to many application problems

procedure from the basic idea and production capabilities through to the real model the conversion from 3D model to 2D manufacturing drawing is also clearly explained Topics covered include modeling of prism axisymmetric symmetric and sophisticated shapes digitization of physical models using modeling software creation of a CAD model starting from a physical model free form surface modeling modeling of product assemblies following bottom up and top down principles and the presentation of a product in accordance with the rules of technical documentation This book which includes more than 500 figures will be ideal for students wishing to gain a sound grasp of space modeling techniques Academics and professionals will find it to be an excellent teaching and research aid and an easy to use guide

Characterization of Fly Ash for Use in Concrete Turgut Demirel, 1983 Recent construction of new generation power plants burning western coal within Iowa has resulted in fly Ash production on the order of 760 000 tons annually Although fly ash has long been accepted as a valuable replacement for portland cement in concrete most experience has been with fly ash generated from eastern bituminous coals A few years ago fly ash in Iowa was not a significant factor because production was small and economics dictated disposal as the better alternative than construction use Today the economic climate coupled with abundance of the material makes constructive use in concrete feasible The problem is however fly ash produced from new power plants is different than that for which information was available It seems fly ash types have outgrown existing standards The objective of this study was to develop fundamental information about fly ashes available to construction in Iowa such that its advantages and limitations as replacement to portland cement can be defined Evaluative techniques used in this work involve sophisticated laboratory equipment not readily available to potential fly ash users so a second goal was preliminary development of rapid diagnostic tests founded on fundamental information Lastly Iowa Department of Transportation research indicated an interesting interdependency among coarse aggregate type fly ash and concrete's resistance to freeze thaw action Thus a third charge of this research project was to verify and determine the cause for the phenomena One objective of this project was to determine properties of Iowa fly ashes and evaluate their relevance to use of the material as an admixture of PCC This phase of the research involved two approaches The first involved the development of a rapid method for determining quantitative elemental composition while the second was aimed at both qualitative and quantitative determination of compounds X ray fluorescence techniques were adapted for rapid determination of elemental composition of fly ash The analysis was performed using a Siemens SR 200 sequential x ray spectrometer controlled by a PDP 11 03 microcomputer The spectrometer was equipped with a ten sample specimen chamber and four interchangeable analyzing crystals Unfiltered excitation radiation was generated using a chromium tube at 50 KV and 48 ma Programs for the spectrometer were developed by the Siemens Corporation
