Modular Programming of Adaptive CAX Manufacturing Process Chains (E-Book) Gunter Spöcker, 2016-11-07 The manufacturing industry is undergoing major changes due to current trends like mass customization and Industrie 4.0. However today's CAX systems and approaches are not suitable to handle adaptive CAX process chains. To overcome this situation and to close the gaps between the existing CAX environment and the requirements for the manufacturing of the future a modular approach based on extended function blocks is presented. The proposed approach is verified based on the use case of a worn out BLIR segment by using repair features. *Intelligent Robotics and Applications* YongAn Huang, Hao Wu, Honghai Liu, Zhouping Yin, 2017-08-04 The three volume set LNAI 10462 LNAI 10463 and LNAI 10464 constitutes the refereed proceedings of the 10th International Conference on Intelligent Robotics and Applications ICIRA 2017 held in Wuhan China in August 2017. The 235 papers presented in the three volumes were carefully reviewed and selected from 310 submissions. The papers in this second volume of the set are organized in topical sections on industrial robot and robot manufacturing mechanism and parallel robotics machine and robot vision robot grasping and control. *Machine Tools Production Systems 3* Christian Brecher, Manfred Weck, 2021-12-13 The first part of this third volume focuses on the design of mechatronic components in particular the feed drives of machine tools used to generate highly dynamic drive movements. Engineering guides for the selection and design of important machine components the control technology of feed drives and the measuring systems required for position capture are presented. Another focus is on process and diagnostic equipment for manufacturing machines and systems. The second part describes control concepts including programming methods for various applications of modern production systems. Programmable logic controllers PLC numerical controllers NC and robot controllers RC are part of these presentations. In the context of automated manufacturing systems the various levels of the automation pyramid and the importance of control systems are also outlined. Finally the volume deals with the engineering of machines and plants. The German Machine Tools and Production Systems Compendium has been completely revised. The previous five volume series has been condensed into three volumes in the new ninth edition with colored technical illustrations throughout. This first English edition is a translation of the German ninth edition. **Machining Dynamics and Parameters Process Optimization** Gorka Urbicain, Daniel Olvera Trejo, 2021-03-19 As we move further into the 21st century despite the fact that new technologies have emerged machining remains the key operation to achieve high productivity and precision for high added value parts in several sectors but recent advances in computer applications should close the gap between simulations and industrial practices.
